We performed analysis of the Python scripts and bash history you requested and provided our analysis notes in late-March. We have not prepared any other reports as we were waiting for you and Stephen to determine if there was any additional analysis you wanted us to conduct. If you would like we can prepare a more formal report of the analysis we conducted on the scripts and bash history, however we have not performed any additional analysis outside of those initial requests.

Please let us know how you would like us to proceed.

Subject: Guerrilla Open Access Manifesto

... *The Open Access Movement* has fought valiantly to ensure that scientists do not sign their copyrights away but instead ensure their work is published on the internet, under terms that allow anyone to access it. But even under the best scenarios, their work will only apply to things published in the future. Everything up until now will have been lost.

That is too high a price to pay. Forcing academics to pay money to read the work of their colleagues? Scanning entire libraries but only allowing the folks at Google to read them? Providing scientific articles to those at elite universities in the First World, but not to children in the Global South? It's outrageous and unacceptable.

"I agree," many say, "but what can we do? The companies hold the copyrights, they make enormous amounts of money by charging for access, and it's perfectly legal — there's nothing we can do to stop them." But there is something we can, something that's already being done: we can fight back. Those with access to these resources — students, librarians, scientists — you have been given a privilege. You get to feed at this banquet of knowledge while the rest of the world is locked out. But you need not — indeed, morally, you cannot — keep this privilege for yourselves. You have a duty to share it with the world. And you have: trading passwords with colleagues, filing download requests for friends. Meanwhile, those who have been locked out are not standing idly by. You have been sneaking through holes and climbing over fences, liberating the information locked up by the publishers and sharing them with your friends.

But all of this action goes on in the dark, hidden underground. It's called stealing or piracy, as if sharing a wealth of knowledge were the moral equivalent of plundering a ship and murdering its crew. But sharing isn't immoral — it's a moral imperative. Only those blinded by greed would refuse to let a friend make a copy.

Large corporations, of course, are blinded by greed....

There is no justice in following unjust laws. It's time to come into the light and, in the grand tradition of civil disobedience, declare our opposition to this private theft of public culture.

We need to take information, wherever it is stored, make our copies and share them with the world. We need to take stuff that's out of copyright and add it to the archive. We need to buy secret databases and put them on the Web. We need to download scientific journals and upload them to file sharing networks....

Subject: Updates of April 14, 2011 Swartz Investigation

Steve,

Item 1:

(b)(6),(b)(7)(C) reached out to me. The lease is up at the end of May 2011. Aaron asked to be a tenant at will, month to month, going forward. He told the landlord that he is probably starting a new job in September in New York and would probably move there in August.

Item 2:

I sat down with the fingerprint analyst today at CPD. I was reviewing the file, her notes, reports etc.

About a month ago I asked her to run (b)(6),(b)(7)(C) prints against prints recovered. I asked her about what she found and she said, "I can't eliminate (b)(6),(b)(7)(C)". I asked her to elaborate on this and she said she has a five point match on (b)(6),(b)(7)(C) from the screen of the Acer.

In some prosecutorial regions, a five point match is sufficient, however, Cambridge Police / Massachusetts has a higher number than that.

With this in mind I had photos of the Acer, the fingerprint and (b)(6),(b)(7)(C) fingerprint card printed out in full glory.

(b)(6),
(b)(7)
(C) and Steve,

I received a phone call from CPD Criminalist (b)(6),(b)(7)(C) today. She told me that the Boston Police Identification unit has verified and concurs with her findings regarding a conclusive match of a print belonging to Aaron Swartz being found on the drive contained within the enclosure.

They are gathering all notes and generating formal reports of such, they will pass off all those to me in the beginning of next week.

I'm at Tampa Airport now trying to get on a flight, I'll be in tomorrow.

(b)(6),
(b)(7)
(C) I'm participating in a warrant sweep starting at 5:00am tomorrow. I should get to the office around 12:00pm.

Thanks

Subject: Numbers of Interest

Hi Steve,

Below are the numbers we would like to have subpoenaed for ownership records.

AT&T numbers: (b)(6),(b)(7)(C) [redacted]

(b)(6),(b)(7)(C)

Verizon:

T-Mobile:

Bandwith.com (competitive local exchange carrier / internet telephony)

(b)(6),(b)(7)(C)

Bandwidth (competitive local exchange carrier / Internet telephony)

(b)(6),(b)(7)(C)

As a result of my conversation with T-Mobile last Friday I was able to glean the following facts.

Internet Addressing: Destination IP and Phone Number IP are generic IP addresses which state that the operator of the phone went out to the Internet. There is no other information available or stored by T-Mobile when an individual accesses the Internet. I asked 18 ways from Sunday for a way to get more information from three different T-Mobile representatives including a tech analyst.

Call Forwarding: When an abbreviation e.g. "SNFC MT - EV, CA" is listed in the Destination Column this indicates that the cell phone operator has placed his phone on "call forward" mode and the number listed under "Phone Number" column is the number the operator punched into the phone directing incoming calls to be forwarded to that number. In the majority of these instances, Swartz has forwarded his calls to (b)(6),(b)(7)(C)

Country Code: 356: Initially upon asking questions all three representatives stated that this was a call from Malta. When pressed that this was not reasonable or logical no explanation was given. In one instance the tech analyst stated that he would do further research and call me back. He never called back and his voicemail now indicates that he is away. After doing some Internet research it would not be outlandish to believe that a person calling Swartz might be spoofing their number.

Conference Calling: The two conference calls placed during the month are calls Swartz initiated. He dialed the two numbers listed in the Phone Number column.

Hope this helps in clarification.

Subject: Good news, bad news

The bad news is my first attempt to image the 2TB drive from the enclosure crashed. The good news is after it crashed I used FTK imager to preview the disk and many, many, many, PDF files are in the clear and unencrypted.

Sent: Wednesday, February 23, 2011 4:59 PM
To: (b)(6),(b)(7)(C) (BOS); (b)(6),(b)(7)(C)
Subject: Revised Paragraph

25. An MIT police officer who had seen several pictures taken by the covert camera in Building 16's network wiring closet saw Aaron Swartz on a bicycle near MIT, approximately half an hour after the "ghost laptop" had been connected in Building W20. The officer stopped his car, activated its blue lights and displayed his wallet badge. When he sought to question Swartz, Swartz dropped his bike to the ground and fled. The backpack in Swartz's possession at the time he was caught and arrested appeared to be the same one he had with him on each occasion he was videotaped in the wiring closet at MIT.

Subject: Proposed additional paragraph for the affidavit

26. On February 9, 2011, the Court issued warrants to search the PREMISES, the ACER LAPTOP, the WESTERN DIGITAL HARD DRIVE, and the USB DRIVE. The warrant to search the PREMISES was executed on February 11, 2011. The warrants to search the ACER LAPTOP, the WESTERN DIGITAL DRIVE, and the USB DRIVE were not executed prior to their expiration on February 22, 2011. At the time the warrant was issued for these pieces of electronic equipment, they were secured within the Identification Unit Laboratory of the Cambridge Police Department. Throughout the period of February 9, 2011, to the present, they have remained within secure areas at Cambridge Police Headquarters, first in the Identification Unit Laboratory, then in the Evidence/Property Unit.

Sent: Wednesday, February 23, 2011 11:52 AM
To: Heymann, Stephen (USAMA)
Cc: (b)(6),(b)(7)(C) usss.dhs.gov
Subject: Evidence Movement

Please consider this email as written chronology for four pieces of evidence seized on January 6, 2011. These four items are

- 1 Acer Netbook/Laptop
- 1 Hard Drive Enclosure with cords
- 1 Hard Disk Drive – Western Digital
- 1 USB Thumb/Flash Drive

These items were grouped into two lots as they were recovered from two locations, the Netbook, HDD enclosure and HDD is one group and the USB Thumb/Drive being the other group.

The Cambridge Police headquarters has two secure areas with limited access on the third floor. One area being called the Property / Evidence Unit and the other being the Identification Unit Laboratory. The wall between these units has an installed evidence locker designed as a pass through system from Evidence to Identification for processing. Upon completion of analysis the items are passed back through the locker system from the Identification Unit back to Evidence.

February 3, 2011 at approximately 11:00am Special Agent (b)(6),(b)(7)(C) and I (b)(6),(b)(7)(C) received the four evidence items from MIT Police (b)(6),(b)(7)(C)

We drove directly from MIT PD to Cambridge Police HQ

February 3, 2011 @ 11:27am the USB Thumb / Flash Drive was logged into Evidence and placed in the evidence locker.

February 3, 2011 @ 11:31am the Netbook, enclosure and HDD were logged into evidence and placed in the evidence locker.

February 3, 2011 @ 11:35am the USB Thumb / Flash Drive was taken from the locker and placed in the ID unit lab.

February 3, 2011 @ 11:35am the Netbook, enclosure and HDD were taken from the locker and placed in the ID unit lab.

February 11, 2011 @ 3:50pm the USB Thumb / Flash Drive was taken from the ID unit lab and placed in the locker.

February 11, 2011 @ 3:09pm the Netbook, enclosure and HDD were taken from the ID unit lab and placed in the locker.

Since February 11, 2011 the above mentioned items have been in the custody of the Evidence / Property Unit and been secured.

Will this timeline suffice? I have printed out the Custody information reports from CPD's database and will add those forms to the records being kept.

This request is well within our capabilities. We'll need some information in terms of authorized / unauthorized IPs and MAC addresses, but it is all stuff you already have. Also, we'll need to know what your objective is for the analysis - my assumption is to reconstruct the offender's observed activity. Finally, we need a rough time line of when the analysis is needed by the USAO.

You could upload the data to our ftp server as you've done in the past or FEDEX it to me.

I uploaded the flow data to CERT. I have not uploaded the packet capture yet. I do not believe the flow data has enough detail to show remote connections into the laptop but the packet capture should if the connection was active while the capture was running. I will check with CERT to see if they have the resources available to analyze the packet capture.

Subject: Federal Rules on Executing a Search Warrant

Mike,

I have just e-mailed you the full text of Rule 41 of the Federal Rules of Criminal Procedure concerning search warrants, which you should read before tomorrow. Below is the subsection on the execution of warrants.

(f) Executing and Returning the Warrant.

(1) Warrant to Search for and Seize a Person or Property.

(A) Noting the Time. The officer executing the warrant must enter on it the exact date and time it was executed.

(B) Inventory. An officer present during the execution of the warrant must prepare and verify an inventory of any property seized. The officer must do so in the presence of another officer and the person from whom, or from whose premises, the property was taken. If either one is not present, the officer must prepare and verify the inventory in the presence of at least one other credible person. In a case involving the seizure of electronic storage media or the seizure or copying of electronically stored information, the inventory may be limited to describing the physical storage media that were seized or copied. The officer may retain a copy of the electronically stored information that was seized or copied.

(C) Receipt. The officer executing the warrant must give a copy of the warrant and a receipt for the property taken to the person from whom, or from whose premises, the property was taken or leave a copy of the warrant and receipt at the place where the officer took the property.

(D) Return. The officer executing the warrant must promptly return it--together with a copy of the inventory--to the magistrate judge designated on the warrant. The judge must, on request, give a copy of the inventory to the person from whom, or from whose premises, the property was taken and to the applicant for the warrant.

Hi Steve,

In response to your question, << The abuse from 18.55.6.215 began on September 24th and continued until it was blocked by JSTOR that evening.

Then abuse began the next morning, on the September 26th, and continued in turn until it was blocked.>>

I am forwarding you a PDF of our incident report for the MIT activity, which contains the answer to these questions. We don't know if the activity started on the 24th (although do the other materials we sent show this?) but

9/25

We first noticed it from 18.55.6.215 on the 25th, circa 7 PM.
We blocked this IP circa 9 PM

9/26

This activity started again, this time from 18.55.6.216 around 8 AM
We noticed it around 10 AM
We blocked 18.55.6.216 at 12 PM
We saw activity start from another IP around 1 PM
We blocked their class C 18.55.6.0/24 around 6 PM

[REDACTED]

Subject: Review of MIT Records

Please review the MIT records we have just received this afternoon and make sure that our current draft of the search warrant affidavit is fully consistent with them. Let me know either that no changes are needed or whatever changes may be necessary in light of the records; I'll wait to send the warrant applications down to the Magistrate Judge until after you have finished your review.

The counts are for PDF downloads, so the 1,385,569 figure represents full articles.

[(b)(6),(b)(7)(C)]

In [(b)(6),(b)(7)(C)]'s numbers below, does 1,385,569 represent separate research articles, or parts (like some title pages, some parts of multi-part articles, etc) or is it impossible to tell for the moment? If you don't know for the moment, is it possible to estimate the number of separate articles?

Steve

Subject: RE: MIT Update: It's worse than we know

I do know from [(b)(6),(b)(7)(C)]'s initial analysis that the downloading was done systematically using sequential increases in our stable URLs. That is, get stable URL 12345, get stable URL 12346, 12347, 12348 and so on.

This tells us a few things. One, that the previous activity was similar to the pattern [(b)(6),(b)(7)(C)] is seeing. That is, not targeted towards types. Two, it lends credence to an entire corpus grab approach. Don't care what it is I am getting, just get me the next one.

[(b)(6),(b)(7)(C)]

Cc: (b)(6),(b)(7)(C)
Subject: Re: MIT Update: It's worse than we know

This doesn't appear to be targeted towards research articles or any particular titles, collections, or disciplines. For the 2.8 million in Nov and Dec, the breakdown by article type is:
Research articles - 1,385,569
Reviews - 938,063
Misc - 459,457
News - 62,127
Editorial - 9,472

Those numbers more or less correlate to the corpus as a whole. I'd say the he was going after everything.

Cc: (b)(6),(b)(7)(C)@ithaka.org
Subject: Re: MIT Update: It's worse than we know

Attached are 2 screen shots depicting PDF download activity from MIT for November and December. One shows all downloads and totals 2,854,824 for the 2 months. The other filters out downloads from the 3 IP's that look to be associated with the download abuse (b)(6),(b)(7)(C) and totals 17,865 for the 2 month period. Recognizing that some legitimate downloads may have occurred from the 3 filtered IP's, it would still be safe to say that about 2.8 million illegal downloads occurred during November and December. We know that some illegal downloading occurred prior to November and into January. I don't have those numbers yet. But looking at the graph you can see that some pretty aggressive downloading was taking place the last week of Dec (over 100k/day). It seems likely this extended into January for some period of time. It wouldn't be much of a stretch to say that as much of a million or more additional downloads may have occurred that are not reflected on this chart. I expect to have January data available for review by Monday. I'll also start loading Oct and Sept numbers as well to complete the picture.

(b)(6),(b)(7)(C)

Hi (b)(6),
(b)(7)(C)

Speaking with (b)(6),(b)(7)(C) just now about making sure we have (b)(6),(b)(7)(C) time as needed for the MIT evaluation currently underway and discovering that the IP addresses associated with these specific incidents have numerous additional days of mass downloading.

It would take some time to normalize against usual MIT usage, but at first glance, it is reasonably safe to assume from what (b) and I covered that the individual responsible has already acquired the entire JSTOR corpus. Glad to have a call ASAP if you think it useful and I let (b) know that I thought you might be calling him shortly after receiving this message for clarification. In light of this information, it would seem that we need to try and understand the full picture outside of the identified incidents going forward. Certainly our tack here merits some re-evaluation, both concerning this case and the potential for additional measures of prevention as we move forward. Also copying in (b) at this juncture.

(b)(6),(b)(7)(C)

Thanks,

(b)(6),(b)(7)(C)

This request is well within our capabilities. We'll need some information in terms of authorized / unauthorized IPs and MAC addresses, but it is all stuff you already have. Also, we'll need to know what your objective is for the analysis - my assumption is to reconstruct the offender's observed activity. Finally, we need a rough time line of when the analysis is needed by the USAO.

You could upload the data to our ftp server as you've done in the past or FEDEX it to me.

Subject: RE: Packet traffic to/from the Acer Laptop

I am working on uploading the packet capture now. It is a nearly 80GB file. I am getting an error message now. 550 failed to capture directory. I will keep working on it. I will put together the information on the IP addresses and MAC addresses. One of the things I would like to know is if the suspect was controlling the laptop remotely and if so, an IP address that we might be able trace to a physical location. Also, I would like to know if the laptop was uploading the documents it was downloading to any other location.

Subject: Re: MIT Update: It's worse than we know

Attached are 2 screen shots depicting PDF download activity from MIT for November and December. One show's all downloads and totals 2,854,824 for the 2 months. The other filters out downloads from the 3 IP's that look to be associated with the download abuse (b)(6),(b)(7)(C) and totals 17,865 for the 2 month period. Recognizing that some legitimate downloads may have occurred from the 3 filtered IP's, it would still be safe to say that about 2.8 million illegal downloads occurred during November and December. We know that some illegal downloading occurred prior to November and into January. I don't have those numbers yet. But looking at the graph you can see that some pretty aggressive downloading was taking place the last week of Dec (over 100k/day). It seems likely this extended into January for some period of time. It wouldn't be much of a stretch to say that as much of a million or more additional downloads may have occurred that are not reflected on this chart. I expect to have January data available for review by Monday. I'll also start loading Oct and Sept numbers as well to complete the picture.

(b)(6),(b)(7)(C)

Still digging and (b)(6) is going to pass along a screen shot of what he is seeing for November and December. It appears as though the activity was less impactful in November, but just these two months ballpark ~2 million + PDFs over their normal usage. (b)(6) is also seeking out data prior and since for review.

Importance: High

Hi (b)(6),(b)(7)(C)

Speaking with (b)(6),(b)(7)(C) just now about making sure we have (b)(6),(b)(7)(C) time as needed for the MIT evaluation currently underway and discovering that the IP addresses associated with these specific incidents have numerous additional days of mass downloading.

It would take some time to normalize against usual MIT usage, but at first glance, it is reasonably safe to assume from what (b)(6) and I covered that the individual responsible has already acquired the entire IJTOR corpus. Glad to have a call ASAP if you think it useful and I let (b)(6) know that I thought you might be calling him shortly after receiving this message for clarification. In light of this information, it would seem that we need to try and understand the full picture outside of the identified incidents going forward. Certainly our tack here merits some re-evaluation, both concerning this case and the potential for additional measures of prevention as we move forward. Also copying in (b)(6) at this juncture.

(b)(6),(b)(7)(C)

Thanks,

(b)(6),(b)(7)(C)

Here are the totals for each IP during Nov/Dec. All but a few thousand of these are probably attributed to the downloader.

(b)(6),(b)(7)(C)	2,341,267 (periods of activity 11/29 - 12/26)
(b)(6),(b)(7)(C)	306,984 (periods of activity 12/27 - ??)
(b)(6),(b)(7)(C)	188,708 (periods of activity 11/6 - 11/11)

FYI

From: [redacted]
Sent: Friday, January 28, 2011 2:29 PM
To: [redacted]
Cc: [redacted]
Subject: Re: MIT Update: It's worse than we know

Attached are 2 screen shots depicting PDF download activity from MIT for November and December. One shows all downloads and totals 2,854,824 for the 2 months. The other filters out downloads from the 3 IP's that look to be associated with the download abuse [redacted] and totals 17,865 for the 2 month period. Recognizing that some legitimate downloads may have occurred from the 3 filtered IP's, it would still be safe to say that about 2.8 million illegal downloads occurred during November and December. We know that some illegal downloading occurred prior to November and into January. I don't have those numbers yet. But looking at the graph you can see that some pretty aggressive downloading was taking place the last week of Dec (over 100k/day). It seems likely this extended into January for some period of time. It wouldn't be much of a stretch to say that as much of a million or more additional downloads may have occurred that are not reflected on this chart. I expect to have January data available for review by Monday. I'll also start loading Oct and Sept numbers as well to complete the picture.

Subject: 950 Mass Ave Description (b)(6),(b)(7)(C)

Dwelling and Storage Locker Description

950 Massachusetts Avenue in Cambridge Massachusetts has three streets that abut the property, Massachusetts Avenue, Bay Street and Green Street. 950 Mass Ave is also known as the Bay Square Condominiums. It contains 109 residential and 4 commercial condominium units. The main entrance to the building is from Massachusetts Avenue. Upon entering the front door there is a foyer between doors that contain a list of resident's last name that show a door bell number for the resident. The door bell numbers do not reflect the actual unit number of the resident. Door bell number (b)(6) has the name Swartz on it.

The building has two lower levels and seven stories above ground on the Massachusetts Avenue side of the building. The two lower levels are garages known as lower garage and upper garage. Floor one is the ground level floor when entering from the Massachusetts Avenue side of the building. The six floors above that are floors 2 through 6 and the 7th floor is referred to as the Penthouse floor.

Unit (b)(6) (Swartz) is located on the (b)(6) floor. It has a dark brown wood grained door with the number (b)(6) attached to it just above the peep hole. It is described as a 586 square foot three room one bedroom, one bathroom corner unit condominium. Aaron Swartz is the listed tenant of unit (b)(6). The owners of the unit are listed as (b)(6),(b)(7)(C).
(b)(6),(b)(7)(C)

There are storage lockers located on the following levels, lower garage, upper garage, first floor and penthouse floor (aka 7th floor). The storage lockers can be described as large locked cages. The occupants place their own locks on the locker doors. Unit (b)(6) is deeded and assigned locker (b)(6) which is located on the (b)(6) floor in a room behind the front concierge desk. The locker is marked with the letter and numeral (b)(6),(b)(7)(C).

950 Massachusetts Avenue aka Bay Square Condominiums is managed by Thayer and Associates located at 1812 Massachusetts Avenue Cambridge, MA 02140 with a telephone number of 617-354-6480.

I have commitments today and tomorrow. I could possibly make the 3:00pm today. (b)(6),(b)(7)(C) I'll keep you posted on that.

That being said, I would be available after 4pm on both days. Could we make that work for a conference call?

Can you two arrange a time on Wednesday when we can get on the phone with (b)(6),(b)(7)(C) both with some follow-up questions and to confirm our understanding of some facts? He will want to be on a speakerphone so he can access the network logs while we talk. My schedule is flexible all day, but all things being equal, the morning would work better for me. Also, our conference line is booked all week, can you arrange one from there?

Steve

Subject: RE: 775.510 Opening Report - Aaron Swartz (102-775-60071-S)

Wow! - from ethics.harvard.edu -- pretty high-profile defendant. He also has his own Wikipedia entry. Surprised this didn't make it into the news. Also weird that he couldn't just afford to buy articles, or have a JSTOR account at Harvard...! - (b)(6).

Aaron Swartz

Lab Fellow, 2010-2011

Aaron Swartz is a writer, hacker, and activist. He co-authored the RSS 1.0 specification, helped develop standards for the Semantic Web, and designed the metadata system for Creative Commons. He co-founded Reddit.com, an online news startup acquired by Condé Nast, and architected OpenLibrary.org. His writing has appeared in a variety of magazines and journals and he has been profiled in Wired and Newsweek. He is on the board of Change Congress and is the co-founder of the Progressive Change Campaign Committee. During the fellowship year, he will conduct experimental and ethnographic studies of the political system to prepare a monograph on the mechanisms of political corruption.

CASE TITLE: AARON SWARTZ
CASE TYPE: 775.510
SECONDARY TYPES: 848.191, 848.304, 848.930
CONTROLLING OFFICE: BOSTON FIELD OFFICE
REPORT MADE BY: SA (b)(6),(b)(7)(C)
DATE CASE OPENED: 01/07/11
PREVIOUS REPORT: N/A
REPORTING PERIOD: 01/04/11 - 01/21/11
STATUS: CONTINUED

SYNOPSIS:

On 01/04/11, MIT police requested assistance from members of the New England Electronic Crime Task Force regarding an investigation into a computer that was found in a locked closet at MIT and was connected to the MIT Network without authorization. Further investigation revealed that a subject later identified as Aaron Swartz, intruded into the MIT network without authorization by making entry into a locked closet containing networking components for MIT networks, connecting a computer to the MIT network, and downloading documents from JSTOR.

On 01/06/11, Aaron Swartz was arrested by MIT Police and agents of the New England Electronic Crimes Task Force and charged with violation of Massachusetts General Law (MGL) for breaking and entering. The investigation of Swartz's unauthorized intrusion into the MIT network and the theft of documents from JSTOR continue.

Case continued in Boston.

DETAILS OF INVESTIGATION:

On 01/04/11, Detective (b)(6),(b)(7)(C) of the Cambridge, MA Police Department and a member of the New England Electronic Crimes Task Force, received a call from (b)(6),(b)(7)(C) (MIT.EDU) of the Massachusetts Institute of Technology (MIT) Police Department, informing him that an unauthorized computer had been found in a wire closet on MIT grounds and that Network Traffic suggested that the computer was being used to download expensive technical journals without authorization. The computer was found in a wire closet in the basement of Building 16, the Dorrance Building (77 Massachusetts Avenue, Cambridge, MA) which houses the MIT Biological Engineering Department.

Continuing on 01/04/11, SA (b)(6),(b)(7)(C) Detective (b)(6),(b)(7)(C) and Detective (b)(6),(b)(7)(C) of the Boston Police Department, traveled to MIT and met with (b)(6),(b)(7)(C) of the MIT Police, (b)(6),(b)(7)(C) Security Analyst, and (b)(6),(b)(7)(C) for Network and Infrastructure Services for MIT, in the basement of building 16. Criminalist (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) from the Cambridge Police Department processed the scene for fingerprints. The netbook found connected to the switch in the wire closet in the basement of building 16 was an Acer Aspire One with a serial number LUSAX0D001001100E1601. Network traffic indicated that the netbook was using two IP addresses (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) which are both IP addresses belonging to MIT. Use of NMap showed that the netbook had port 22 and 8092 open. Port 22 is the default port for SSH (Secure Shell network protocol) and port 8092 is often associated with TCP (Transmission Control Protocol) traffic. A surveillance camera was placed in the wire closet to record anyone returning for the netbook.

Continuing on 01/04/11, at approximately 1526, the surveillance camera recorded a white male, later identified as Aaron Swartz (DOB 11/08/86), enter the wire closet. Based on the surveillance video, Swartz appeared to replace the external hard drive with a new one and take the old hard drive with him.

Further on 01/04/11, (b)(6),(b)(7)(C) was able to provide SA (b)(6),(b)(7)(C) with the following timeline regarding this investigation:

On 09/26/10, (b)(6),(b)(7)(C) received an email from (b)(6),(b)(7)(C) Manager, stating that excessive downloading of journals had been detected from MIT, and that all of MIT access to JSTOR would be blocked. JSTOR converts printed scholarly journals into electronic form and stores them in a central archive that can be accessed by libraries and institutions such as MIT.

On 09/27/10, the MIT Network and Information Security Team received an email from (b)(6),(b)(7)(C) Scholarly Publishing and Licensing, regarding excessive downloading from two IP addresses (b)(6),(b)(7)(C) and 18.55.6.215. JSTOR restored MIT access but blocked access to the identified IP addresses. (b)(6),(b)(7)(C)

(b)(6),(b)(7)(C) mit.edu (b)(6),(b)(7)(C) Security Analyst, discovered network registration for "Gary Host" with email address ghost@mailinator.com, a MAC address of 00235a735ffb and computer name "ghost-macbook" registered on the network on 09/24/10. (b)(6),(b)(7) disabled the computer registration.

On 10/09/10, (b)(6),(b)(7)(C) from JSTOR Operations Staff, emailed (b)(6),(b)(7)(C) Libraries, to inform her that MIT's access to JSTOR had been cut off again due to excessive downloading.

On 10/12/10, the MIT Network and Information Security Team received an email from (b)(6),(b)(7)(C) stating that JSTOR informed her that excessive downloading came from IP address (b)(6),(b)(7)(C)

On 10/13/10, (b)(6),(b)(7)(C) traced the second occurrence of excessive unauthorized downloading to a computer registered on the network as "Grace Host" with an email of ghost42@mailinator.com, a MAC address of 0017f22cb074 and computer name of "ghost-laptop". (b)(6),(b)(7) disabled the host registrations identified as bogus. (b)(6),(b)(7)(C)

(b)(6),(b)(7)(C) Security and Support Services for MIT, notified (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) Operations and Infrastructure, that information indicated that the same unknown person appears to be using MIT guest registration from a wired connection in building 16.

On 11/29/10, the MIT Network and Information Security Team was notified by the MIT branch of the Institute of Electrical and Electronic Engineers that journal spidering has occurred on their site and it was tracked to the Student Information Processing Board XVM cluster, a group of computers that are shared and that anyone in the MIT community can use to host a Virtual Machine.

On 01/03/11, (b)(6),(b)(7)(C) received an email from (b)(6),(b)(7)(C) forwarded from (b)(6),(b)(7)(C) informing him that that the excessive downloading of journals had begun again.

On 01/04/11, (b)(6),(b)(7)(C) emailed (b)(6),(b)(7)(C) Network Operations, and (b)(6),(b)(7)(C) mit.edu (b)(6),(b)(7)(C) for Network and Infrastructure Services for MIT, asking them to further pinpoint the location of the computer downloading the journals. At 0808, (b)(6),(b)(7) located a computer hidden by a box connected to a switch in a wire closet in the basement of building 16. The computer was also connected to an external hard drive. (b)(6),(b)(7) established a packet capture of the same switch the computer was found attached to.

(b)(6),(b)(7)(C) also provided SA (b)(6),(b)(7)(C) with a copy of historical network flow data concerning IP addresses (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) from 12/14/10 to 01/04/11 and DHCP log information for computers registered as ghost-macbook and ghost-laptop.

SA (b)(6),(b)(7)(C) contacted SA (b)(6),(b)(7)(C) (CID) at the CERT Coordination Center at the Software Engineering Institute at Carnegie Mellon University. SA (b)(6),(b)(7)(C)

provided SA (b)(6),(b)(7)(C) with instructions to upload the data to the CERT drop box.

On 01/06/11, at approximately 1232, video surveillance showed the individual later identified as Swartz return to the wire closet and remove the netbook and external hard drive. Later, (b)(6),(b)(7)(C) of the MIT Police Department called (b)(6),(b)(7)(C) of the MIT Police Department and stated that he had located the suspect later identified as Swartz riding his bicycle on Massachusetts Avenue near the intersection with Lee Street in Cambridge, Massachusetts. (b)(6),(b)(7)(C) and SA (b)(6),(b)(7)(C) responded to Lee Street to assist (b)(6),(b)(7)(C) attempted to interview Swartz however Swartz jumped off of his bicycle and ran down Lee Street. (b)(6),(b)(7)(C) and SA (b)(6),(b)(7)(C) detained the suspect and he was subsequently placed under arrest. A search of the backpack the suspect was wearing revealed a U.S. passport in the name of Aaron Swartz and one (1) USB Thumb Drive. No computer was found in the backpack. Swartz was transported by Cambridge Police to Cambridge Police headquarters and subsequently charged with violation of Massachusetts General Law (MGL) for Breaking and Entering.

Also on 01/06/11, (b)(6),(b)(7)(C) checked the DHCP logs for computer registrations containing the word "ghost". Ghost-laptop was identified as still being active on the MIT network using the same MAC address as used on 01/04/11 to download journals. (b)(6),(b)(7)(C) (mit.edu) an (b)(6),(b)(7)(C) traced ghost-laptop on the network to building W20 on the 5th floor. MIT Building W20 is the Stratton Student Center. (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) traveled to the Stratton Student Center and determined that the network drop location ghost-laptop connected to was the Student Information Processing Board office, room 557. (b)(6),(b)(7)(C) contacted (b)(6),(b)(7)(C) to inform him that they had traced the netbook to a room in the student center. SA (b)(6),(b)(7)(C) met (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) at the student center and found the Acer Aspire netbook and external hard drive unattended, under a table, powered on and connected to the MIT network by a cable. Using gloves, SA (b)(6),(b)(7)(C) examined the netbook. The netbook appeared to be frozen halfway in the shutdown state and all attempts to access a terminal on the machine were unsuccessful. It was determined it would not be possible to conduct live forensics or capture a snapshot of the memory of the computer in its current state. The laptop was placed in an evidence bag and turned over to MIT Police to be inventoried into evidence.

Continuing on 01/06/11, SA (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) traveled to Cambridge Police Headquarters to interview Swartz. At Cambridge Headquarters, SA (b)(6),(b)(7)(C) met (b)(6),(b)(7)(C) (b)(6),(b)(7)(C) (b)(6),(b)(7)(C) com). (b)(6),(b)(7)(C) informed SA (b)(6),(b)(7)(C) that he represented Swartz and that his client would not make a statement. Swartz was not cooperative with investigators. Swartz initially refused to provide his name, date of birth and other biographical information.

On 01/10/11, SA (b)(6),(b)(7)(C) AUSA Heymann and (b)(6),(b)(7)(C) from JSTOR conducted a conference call to discuss the theft of material from JSTOR.

On 01/14/11, SA (b)(6),(b)(7)(C) Detective (b)(6),(b)(7)(C) and AUSA Heymann met at the MIT office of General Counsel with counsel for MIT. (b)(6),(b)(7)(C)

JUDICIAL ACTION:

On 01/06/11, Aaron Swartz was arrested by MIT Police Department and charged with violation of Massachusetts General Law (MGL) Chapter 266, Section 18, Breaking and Entering.

On 01/06/11, SA (b)(6),(b)(7)(C) contacted AUSA Steven Heymann, District of Massachusetts, to brief him on the above investigation.

On 01/07/11, Aaron Swartz was arraigned in Cambridge, MA District Court for violation of MGL Chapter 266, Section 18, Breaking and Entering. The case was assigned docket number 1152CR0073.

SYNOPSIS:

On 01/04/11, MIT police requested assistance from members of the New England Electronic Crime Task Force regarding an investigation into a computer that was found in a locked closet at MIT and was connected to the MIT Network without authorization. Further investigation revealed that a subject later identified as Aaron Swartz, intruded into the MIT network without authorization by making entry into a locked closet containing networking components for MIT networks, connecting a computer to the MIT network, and downloading documents from JSTOR.

On 01/06/11, Aaron Swartz was arrested by MIT Police and agents of the New England Electronic Crimes Task Force and charged with violation of Massachusetts General Law (MGL) for breaking and entering. The investigation of Swartz's unauthorized intrusion into the MIT network and the theft of documents from JSTOR continue.

Case continued in Boston.

DETAILS OF INVESTIGATION:

On 01/04/11, Detective [REDACTED] (b)(6),(b)(7)(C) of the Cambridge, MA Police Department and a member of the New England Electronic Crimes Task Force, received a call from [REDACTED] (b)(6),(b)(7)(C) MIT.EDU) of the Massachusetts Institute of Technology (MIT) Police Department, informing him that an unauthorized computer had been found in a wire closet on MIT grounds and that Network Traffic suggested that the computer was being used to download expensive technical journals without authorization. The computer was found in a wire closet in the basement of Building 16, the Dorrance Building (77 Massachusetts Avenue, Cambridge, MA) which houses the MIT Biological Engineering Department.

Continuing on 01/04/11, SA (b)(6),(b)(7)(C) Detective (b)(6),(b)(7)(C) and Detective (b)(6),(b)(7)(C) of the Boston Police Department, traveled to MIT and met with (b)(6),(b)(7)(C) of the MIT Police, (b)(6),(b)(7)(C) Security Analyst, and (b)(6),(b)(7)(C) for Network and Infrastructure Services for MIT, in the basement of building 16. Criminalist (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) from the Cambridge Police Department processed the scene for fingerprints. The netbook found connected to the switch in the wire closet in the basement of building 16 was an Acer Aspire One with a serial number LUSAX0D001001100E1601. Network traffic indicated that the netbook was using two IP addresses (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) which are both IP addresses belonging to MIT. Use of NMap showed that the netbook had port 22 and 8092 open. Port 22 is the default port for SSH (Secure Shell network protocol) and port 8092 is often associated with TCP (Transmission Control Protocol) traffic. A surveillance camera was placed in the wire closet to record anyone returning for the netbook.

Continuing on 01/04/11, at approximately 1526, the surveillance camera recorded a white male, later identified as Aaron Swartz (DOB 11/08/86), enter the wire closet. Based on the surveillance video, Swartz appeared to replace the external hard drive with a new one and take the old hard drive with him.

Further on 01/04/11, (b)(6),(b)(7)(C) was able to provide SA (b)(6),(b)(7)(C) with the following timeline regarding this investigation:

On 09/26/10, (b)(6),(b)(7)(C) received an email from (b)(6),(b)(7)(C) stating that excessive downloading of journals had been detected from MIT, and that all of MIT access to JSTOR would be blocked. JSTOR converts printed scholarly journals into electronic form and stores them in a central archive that can be accessed by libraries and institutions such as MIT.

On 09/27/10, the MIT Network and Information Security Team received an email from (b)(6),(b)(7)(C) of Scholarly Publishing and Licensing, regarding excessive downloading from two IP addresses (b)(6),(b)(7)(C) and 18.55.6.215. JSTOR restored MIT access but blocked access to the identified IP addresses. (b)(6),(b)(7)(C)

(b)(6),(b)(7)(C) mit.edu), (b)(6),(b)(7)(C) Security Analyst, discovered network registration for "Gary Host" with email address ghost@mailinator.com, a MAC address of 00235a735ffb and computer name "ghost-macbook" registered on the network on 09/24/10. (b)(6),(b)(7)(C) disabled the computer registration.

On 10/09/10, (b)(6),(b)(7)(C) from JSTOR Operations Staff, emailed (b)(6),(b)(7)(C) to inform her that MIT's access to JSTOR had been cut off again due to excessive downloading.

(b)(6),(b)(7)(C)

responded to Lee Street to assist (b)(6),(b)(7)(C) attempted to interview Swartz, however Swartz jumped off of his bicycle and ran down Lee Street. (b)(6),(b)(7)(C) and SA (b)(6),(b)(7) detained the suspect and he was subsequently placed under arrest. A search of the backpack the suspect was wearing revealed a U.S. passport in the name of Aaron Swartz and one (1) USB Thumb Drive. No computer was found in the backpack. Swartz was transported by Cambridge Police to Cambridge Police headquarters and subsequently charged with violation of Massachusetts General Law (MGL) for Breaking and Entering.

Also on 01/06/11, (b)(6),(b)(7)(C) checked the DHCP logs for computer registrations containing the word "ghost". Ghost-laptop was identified as still being active on the MIT network using the same MAC address as used on 01/04/11 to download journals. (b)(6),(b)(7)(C) (mit.edu) an (b)(6),(b)(7)(C) traced ghost-laptop on the network to building W20 on the 5th floor. MIT Building W20 is the Stratton Student Center. (b)(6),(b)(7)(C) and (b)(6),(b)(7) traveled to the Stratton Student Center and determined that the network drop location ghost-laptop connected to was the Student Information Processing Board office, room 557. (b)(6),(b)(7) contacted (b)(6),(b)(7)(C) to inform him that they had traced the netbook to a room in the student center. SA (b)(6),(b)(7)(C) met (b)(6),(b)(7) and (b)(6),(b)(7) at the student center and found the Acer Aspire netbook and external hard drive unattended, under a table, powered on and connected to the MIT network by a cable. Using gloves, SA (b)(6),(b)(7) examined the netbook. The netbook appeared to be frozen halfway in the shutdown state and all attempts to access a terminal on the machine were unsuccessful. It was determined it would not be possible to conduct live forensics or capture a snapshot of the memory of the computer in its current state. The laptop was placed in an evidence bag and turned over to MIT Police to be inventoried into evidence.

Continuing on 01/06/11, SA (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) traveled to Cambridge Police Headquarters to interview Swartz. At Cambridge Headquarters, SA (b)(6),(b)(7) met Philip G Cormier (b)(6),(b)(7)(C) (b)(6),(b)(7)(C)@woodcormier.com). Cormier informed SA (b)(6),(b)(7)(C) that he represented Swartz and that his client would not make a statement. Swartz was not cooperative with investigators. Swartz initially refused to provide his name, date of birth and other biographical information.

On 01/10/11, SA (b)(6),(b)(7)(C) AUSA Heymann and (b)(6),(b)(7)(C) from JSTOR conducted a conference call to discuss the theft of material from JSTOR.

On 01/14/11, SA (b)(6),(b)(7)(C) Detective (b)(6),(b)(7)(C) and AUSA Heymann met at the MIT office of General Counsel with (b)(6),(b)(7)(C) counsel for MIT.

JUDICIAL ACTION:

On 01/06/11, Aaron Swartz was arrested by MIT Police Department and charged with violation of Massachusetts General Law (MGL) Chapter 266, Section 18, Breaking and Entering.

On 01/06/11, SA (b)(6),(b)(7)(C) contacted AUSA Steven Heymann, District of Massachusetts, to brief him on the above investigation.

On 01/07/11, Aaron Swartz was arraigned in Cambridge, MA District Court for violation of MGL Chapter 266, Section 18, Breaking and Entering. The case was assigned docket number 1152CR0073.

CONTROLLING OFFICE: BOSTON FIELD OFFICE
REPORT MADE BY: SA (b)(6),(b)(7)(C)
DATE CASE OPENED: 01/07/11
PREVIOUS REPORT: N/A
REPORTING PERIOD: 01/04/11 - 01/21/11
STATUS: CONTINUED

SYNOPSIS:

On 01/04/11, MIT police requested assistance from members of the New England Electronic Crime Task Force regarding an investigation into a computer that was found in a locked closet at MIT and was connected to the MIT Network without authorization. Further investigation revealed that a subject later identified as Aaron Swartz, intruded into the MIT network without authorization by making entry into a locked closet containing networking components for MIT networks, connecting a computer to the MIT network, and downloading documents from JSTOR.

On 01/06/11, Aaron Swartz was arrested by MIT Police and agents of the New England Electronic Crimes Task Force and charged with violation of Massachusetts General Law (MGL) for breaking and entering. The investigation of Swartz's unauthorized intrusion into the MIT network and the theft of documents from JSTOR continue.

Case continued in Boston.

DETAILS OF INVESTIGATION:

On 01/04/11, Detective (b)(6),(b)(7)(C) of the Cambridge, MA Police Department and a member of the New England Electronic Crimes Task Force, received a call from (b)(6),(b)(7)(C) MIT.EDU) of the Massachusetts Institute of Technology (MIT) Police Department, informing him that an unauthorized computer had been found in a wire closet on MIT grounds and that Network Traffic suggested that the computer was being used to download expensive technical journals without authorization. The computer was found in a wire closet in the basement of Building 16, the Dorrance Building (77 Massachusetts Avenue, Cambridge, MA) which houses the MIT Biological Engineering Department.

Continuing on 01/04/11, SA (b)(6),(b)(7)(C) Detective (b)(6),(b)(7)(C) and Detective (b)(6),(b)(7)(C) of the Boston Police Department, traveled to MIT and met with (b)(6),(b)(7)(C) of the MIT Police, (b)(6),(b)(7)(C) Security Analyst, and (b)(6),(b)(7)(C) for Network and Infrastructure Services for MIT, in the basement of building 16. Criminalist (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) from the Cambridge Police Department processed the scene for fingerprints. The netbook found connected to the switch in the wire closet in the basement of building 16 was an Acer Aspire One with a serial number LUSAX0D001001100E1601. Network traffic indicated that the netbook was using two IP addresses (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) which are both IP addresses belonging to MIT. Use of NMap showed that the netbook had port 22 and 8092 open. Port 22 is the default port for SSH (Secure Shell network protocol) and port 8092 is often associated with TCP (Transmission Control Protocol) traffic. A surveillance camera was placed in the wire closet to record anyone returning for the netbook.

Continuing on 01/04/11, at approximately 1526, the surveillance camera recorded a white male, later identified as Aaron Swartz (DOB 11/08/86), enter the wire closet. Based on the surveillance video, Swartz appeared

to replace the external hard drive with a new one and take the old hard drive with him.

Further on 01/04/11, (b)(6),(b)(7)(C) was able to provide SA (b)(6),(b)(7)(C) with the following timeline regarding this investigation:

On 09/26/10, (b)(6),(b)(7)(C) received an email from (b)(6),(b)(7)(C) stating that excessive downloading of journals had been detected from MIT, and that all of MIT access to JSTOR would be blocked. JSTOR converts printed scholarly journals into electronic form and stores them in a central archive that can be accessed by libraries and institutions such as MIT.

On 09/27/10, the MIT Network and Information Security Team received an email from (b)(6),(b)(7)(C) of Scholarly Publishing and Licensing, regarding excessive downloading from two IP addresses (b)(6),(b)(7)(C) and 18.55.6.215. JSTOR restored MIT access but blocked access to the identified IP addresses. (b)(6),(b)(7)(C)

(b)(6),(b)(7)(C) mit.edu), (b)(6),(b)(7)(C) (b)(6),(b)(7)(C), discovered network registration for "Gary Host" with email address ghost@mailinator.com, a MAC address of 00235a735ffb and computer name "ghost-macbook" registered on the network on 09/24/10 (b)(6),(b)(7)(C) disabled the computer registration.

On 10/09/10, (b)(6),(b)(7)(C) from JSTOR Operations Staff, emailed (b)(6),(b)(7)(C) to inform her that MIT's access to JSTOR had been cut off again due to excessive downloading.

On 10/12/10, the MIT Network and Information Security Team received an email from (b)(6),(b)(7)(C) stating that JSTOR informed her that excessive downloading came from IP address (b)(6),(b)(7)(C)

On 10/13/10, (b)(6),(b)(7)(C) traced the second occurrence of excessive unauthorized downloading to a computer registered on the network as "Grace Host" with an email of ghost42@mailinator.com, a MAC address of 0017f22cb074 and computer name of "ghost-laptop" (b)(6),(b)(7)(C) disabled the host registrations identified as bogus. (b)(6),(b)(7)(C)

(b)(6),(b)(7)(C) Security and Support Services for MIT, notified (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) MIT Operations and Infrastructure, that information indicated that the same unknown person appears to be using MIT guest registration from a wired connection in building 15.

On 11/29/10, the MIT Network and Information Security Team was notified by the MIT branch of the Institute of Electrical and Electronic Engineers that journal spidering has occurred on their site and it was tracked to the Student Information Processing Board XVM cluster, a group of computers that are shared and that anyone in the MIT community can use to host a Virtual Machine.

On 01/03/11, (b)(6),(b)(7)(C) received an email from (b)(6),(b)(7)(C) forwarded from (b)(6),(b)(7)(C) informing him that that the excessive downloading of journals had begun again.

On 01/04/11, (b)(6),(b)(7)(C) emailed (b)(6),(b)(7)(C) Network Operations, and (b)(6),(b)(7)(C) (mit.edu) (b)(6),(b)(7)(C) Network and Infrastructure Services for MIT, asking them to further pinpoint the location of the computer downloading the journals. At 0808, (b)(6),(b)(7) located a computer hidden by a box connected to a switch in a wire closet in the basement of building 16. The computer was also connected to an external hard drive. (b)(6),(b)(7) established a packet capture of the same switch the computer was found attached to.

(b)(6),(b)(7)(C) also provided SA (b)(6),(b)(7)(C) with a copy of historical network flow data concerning IP addresses (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) from 12/14/10 to 01/04/11 and DHCP log information for computers registered as ghost-macbook and ghost-laptop.

SA (b)(6),(b)(7)(C) contacted SA (b)(6),(b)(7)(C) (CID) at the CERT Coordination Center at the Software Engineering Institute at Carnegie Mellon University. SA (b)(6),(b)(7)(C) provided SA (b)(6),(b)(7)(C) with instructions to upload the data to the CERT drop box.

On 01/06/11, at approximately 1232, video surveillance showed the individual later identified as Swartz return to the wire closet and remove the netbook and external hard drive. Later, (b)(6),(b)(7)(C) of the MIT Police Department called (b)(6),(b)(7)(C) of the MIT Police Department and stated that he had located the suspect later identified as Swartz riding his bicycle on Massachusetts Avenue near the intersection with Lee Street in Cambridge, Massachusetts. (b)(6),(b)(7)(C) and SA (b)(6),(b)(7)(C) responded to Lee Street to assist (b)(6),(b)(7)(C) attempted to interview Swartz, however Swartz jumped off of his bicycle and ran down Lee Street. (b)(6),(b)(7)(C) and SA (b)(6),(b)(7)(C) detained the suspect and he was subsequently placed under arrest. A search of the backpack the suspect was wearing revealed a U.S. passport in the name of Aaron Swartz and one (1) USB Thumb Drive. No computer was found in the backpack. Swartz was transported by Cambridge Police to Cambridge Police headquarters and subsequently charged with violation of Massachusetts General Law (MGL) for Breaking and Entering.

Also on 01/06/11, (b)(6),(b)(7)(C) checked the DHCP logs for computer registrations containing the word "ghost". Ghost-laptop was identified as still being active on the MIT network using the same MAC address as used on 01/04/11 to download journals. (b)(6),(b)(7)(C) (mit.edu) an (b)(6),(b)(7)(C) traced ghost-laptop on the network to building W20 on the 5th floor. MIT Building W20 is the Stratton Student Center. (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) traveled to the Stratton Student Center and determined that the network drop location ghost-laptop connected to was the Student Information Processing Board office, room 557. (b)(6),(b)(7)(C) contacted (b)(6),(b)(7)(C) to inform him that they had traced the netbook to a room in the student center. SA (b)(6),(b)(7)(C) met (b)(6),(b)(7)(C) and

(b)(6),(b)(7)
(C)

at the student center and found the Acer Aspire netbook and external hard drive unattended, under a table, powered on and connected to the MIT network by a cable. Using gloves, SA (b)(6),(b)(7) examined the netbook. The netbook appeared to be frozen halfway in the shutdown state and all attempts to access a terminal on the machine were unsuccessful. It was determined it would not be possible to conduct live forensics or capture a snapshot of the memory of the computer in its current state. The laptop was placed in an evidence bag and turned over to MIT Police to be inventoried into evidence.

Continuing on 01/06/11, SA (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) traveled to Cambridge Police Headquarters to interview Swartz. At Cambridge Headquarters, SA (b)(6),(b)(7) et Philip G Cormier (b)(6),(b)(7)(C)

(b)(6),(b)(7)(C) goodcormier.com). Cormier informed SA (b)(6),(b)(7) that he represented Swartz and that his client would not make a statement. Swartz was not cooperative with investigators. Swartz initially refused to provide his name, date of birth and other biographical information.

On 01/10/11, SA (b)(6),(b)(7)(C) AUSA Heymann and (b)(6),(b)(7)(C) from JSTOR conducted a conference call to discuss the theft of material from JSTOR.

On 01/14/11, SA (b)(6),(b)(7)(C) Detective (b)(6),(b)(7)(C) and AUSA Heymann met at the MIT office of General Counsel with (b)(6),(b)(7)(C) counsel for MIT.

JUDICIAL ACTION:

On 01/06/11, Aaron Swartz was arrested by MIT Police Department and charged with violation of Massachusetts General Law (MGL) Chapter 266, Section 18, Breaking and Entering.

On 01/06/11, SA (b)(6),(b)(7)(C) contacted AUSA Steven Heymann, District of Massachusetts, to brief him on the above investigation.

On 01/07/11, Aaron Swartz was arraigned in Cambridge, MA District Court for violation of MGL Chapter 266, Section 18, Breaking and Entering. The case was assigned docket number 1152CR0073.

SYNOPSIS:

On 01/04/11, MIT police requested assistance from members of the New England Electronic Crime Task Force regarding an investigation into a computer that was found in a locked closet at MIT and was connected to the MIT Network without authorization. Further investigation revealed that a subject later identified as Aaron Swartz, intruded into the MIT network without authorization by making entry into a locked closet containing networking components for MIT networks, connecting a computer to the MIT network, and downloading documents from JSTOR.

On 01/06/11, Aaron Swartz was arrested by MIT Police and agents of the New England Electronic Crimes Task Force and charged with violation of Massachusetts General Law (MGL) for breaking and entering. The investigation of Swartz's unauthorized intrusion into the MIT network and the theft of documents from JSTOR continue.

Case continued in Boston.

DETAILS OF INVESTIGATION:

On 01/04/11, Detective (b)(6),(b)(7)(C) of the Cambridge, MA Police Department and a member of the New England Electronic Crimes Task Force, received a call from (b)(6),(b)(7)(C) MIT.EDU) of the Massachusetts Institute of Technology (MIT) Police Department, informing him that an unauthorized computer had been found in a wire closet on MIT grounds and that Network Traffic suggested that the computer was being used to download expensive technical journals without authorization. The computer was found in a wire closet in the basement of Building 16, the Dorrance Building (77 Massachusetts Avenue, Cambridge, MA) which houses the MIT Biological Engineering Department.

Continuing on 01/04/11, SA (b)(6),(b)(7)(C) Detective (b)(6),(b)(7)(C) and Detective (b)(6),(b)(7)(C) of the Boston Police Department, traveled to MIT and met with (b)(6),(b)(7)(C) of the MIT Police, (b)(6),(b)(7)(C) Security Analyst, and (b)(6),(b)(7)(C) for Network and Infrastructure Services for MIT, in the basement of building 16. Criminalist (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) from the Cambridge Police Department processed the scene for fingerprints. The netbook found connected to the switch in the wire closet in the basement of building 16 was an Acer Aspire One with a serial number LUSAX0D001001100E1601. Network traffic indicated that the netbook was using two IP addresses (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) which are both IP addresses belonging to MIT. Use of NMap showed that the netbook had port 22 and 8092 open. Port 22 is the default port for SSH (Secure Shell network protocol) and port 8092 is often associated with TCP (Transmission Control Protocol) traffic. A surveillance camera was placed in the wire closet to record anyone returning for the netbook.

Continuing on 01/04/11, at approximately 1526, the surveillance camera recorded a white male, later identified as Aaron Swartz (DOB 11/08/86), enter the wire closet. Based on the surveillance video, Swartz appeared to replace the external hard drive with a new one and take the old hard drive with him.

Further on 01/04/11, (b)(6),(b)(7)(C) was able to provide SA (b)(6),(b)(7)(C) with the following timeline regarding this investigation:

On 09/26/10, (b)(6),(b)(7)(C) received an email from (b)(6),(b)(7)(C) stating that excessive downloading of journals had been detected from MIT, and that all of MIT access to JSTOR would be blocked. JSTOR converts printed scholarly journals into electronic form and stores

them in a central archive that can be accessed by libraries and institutions such as MIT.

On 09/27/10, the MIT Network and Information Security Team received an email from (b)(6),(b)(7)(C) Scholarly Publishing and Licensing, regarding excessive downloading from two IP addresses (b)(6),(b)(7)(C) and 18.55.6.215. JSTOR restored MIT access but blocked access to the identified IP addresses. (b)(6),(b)(7)(C)

(b)(6),(b)(7)(C) mit.edu (b)(6),(b)(7)(C) Security Analyst, discovered network registration for "Gary Host" with email address ghost@mailinator.com, a MAC address of 00235a735ffb and computer name "ghost-macbook" registered on the network on 09/24/10. (b)(6),(b)(7) disabled the computer registration.

On 10/09/10, (b)(6),(b)(7)(C) from JSTOR Operations Staff, emailed (b)(6),(b)(7)(C) to inform her that MIT's access to JSTOR had been cut off again due to excessive downloading.

On 10/12/10, the MIT Network and Information Security Team received an email from (b)(6),(b)(7)(C) stating that JSTOR informed her that excessive downloading came from IP address (b)(6),(b)(7)(C)

On 10/13/10, (b)(6),(b)(7)(C) traced the second occurrence of excessive unauthorized downloading to a computer registered on the network as "Grace Host" with an email of ghost42@mailinator.com, a MAC address of 0017f22cb074 and computer name of "ghost-laptop". (b)(6),(b)(7) disabled the host registrations identified as bogus. (b)(6),(b)(7)(C)

(b)(6),(b)(7)(C) Security and Support Services for MIT, notified (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) MIT Operations and Infrastructure, that information indicated that the same unknown person appears to be using MIT guest registration from a wired connection in building 16.

On 11/29/10, the MIT Network and Information Security Team was notified by the MIT branch of the Institute of Electrical and Electronic Engineers that journal spidering has occurred on their site and it was tracked to the Student Information Processing Board XVM cluster, a group of computers that are shared and that anyone in the MIT community can use to host a Virtual Machine.

On 01/03/11, (b)(6),(b)(7)(C) received an email from (b)(6),(b)(7)(C) forwarded from (b)(6),(b)(7)(C) informing him that that the excessive downloading of journals had begun again.

On 01/04/11, (b)(6),(b)(7)(C) emailed (b)(6),(b)(7)(C) Network Operations, and (b)(6),(b)(7)(C) mit.edu (b)(6),(b)(7)(C) Network and Infrastructure Services for MIT, asking them to further pinpoint the location of the computer downloading the journals. At 0808, (b)(6),(b)(7) located a computer hidden by a box connected to a switch in a wire closet in the basement of building 16. The computer was also connected to an external hard drive. (b)(6),(b)(7) established a packet capture of the same switch the computer was found attached to.

(b)(6),(b)(7)(C) also provided SA (b)(6),(b)(7)(C) with a copy of historical network flow data concerning IP addresses (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) from 12/14/10 to 01/04/11 and DHCP log information for computers registered as ghost-macbook and ghost-laptop.

SA (b)(6),(b)(7)(C) contacted SA (b)(6),(b)(7)(C) (CID) at the CERT Coordination Center at the Software Engineering Institute at Carnegie Mellon University. SA (b)(6),(b)(7) provided SA (b)(6),(b)(7)(C) with instructions to upload the data to the CERT drop box.

On 01/06/11, at approximately 1232, video surveillance showed the individual later identified as Swartz return to the wire closet and remove the netbook and external hard drive. Later, (b)(6),(b)(7)(C) of the MIT Police Department called (b)(6),(b)(7)(C) of the MIT Police Department and stated that he had located the suspect later identified as Swartz riding his bicycle on Massachusetts Avenue near the intersection with Lee Street in Cambridge, Massachusetts. (b)(6),(b)(7)(C) and SA (b)(6),(b)(7)(C) responded to Lee Street to assist (b)(6),(b)(7)(C) attempted to interview Swartz, however Swartz jumped off of his bicycle and ran down Lee Street. (b)(6),(b)(7)(C) and SA (b)(6),(b)(7) detained the suspect and he was subsequently placed under arrest. A search of the backpack the suspect was wearing revealed a U.S. passport in the name of Aaron Swartz and one (1) USB Thumb Drive. No computer was found in the backpack. Swartz was transported by Cambridge Police to Cambridge Police headquarters and subsequently charged with violation of Massachusetts General Law (MGL) for Breaking and Entering.

Also on 01/06/11, (b)(6),(b)(7)(C) checked the DHCP logs for computer registrations containing the word "ghost". Ghost-laptop was identified as still being active on the MIT network using the same MAC address as used on 01/04/11 to download journals. (b)(6),(b)(7)(C) (mit.edu) an

(b)(6),(b)(7)(C) traced ghost-laptop on the network to building W20 on the 5th floor. MIT Building W20 is the Stratton Student Center. (b)(6),(b)(7)(C) and (b)(6),(b)(7) traveled to the Stratton Student Center and determined that the network drop location ghost-laptop connected to was the Student Information Processing Board office, room 557. (b)(6),(b)(7) contacted (b)(6),(b)(7)(C) to inform him that they had traced the netbook to a room in the student center. SA (b)(6),(b)(7) met (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) at the student center and found the Acer Aspire netbook and external hard drive unattended, under a table, powered on and connected to the MIT network by a cable. Using gloves, SA (b)(6),(b)(7) examined the netbook. The netbook appeared to be frozen halfway in the shutdown state and all attempts to access a terminal on the machine were unsuccessful. It was determined it would not be possible to conduct live forensics or capture a snapshot of the memory of the computer in its current state. The laptop was placed in an evidence bag and turned over to MIT Police to be inventoried into evidence.

Continuing on 01/06/11, SA (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) traveled to Cambridge Police Headquarters to interview Swartz. At Cambridge Headquarters, SA (b)(6),(b)(7)(C) met (b)(6),(b)(7)(C) (b)(6),(b)(7)(C)

(b)(6),(b)(7)(C) foodcornier.com). (b)(6),(b)(7)(C) informed SA (b)(6),(b)(7)(C) that he represented Swartz and that his client would not make a statement. Swartz was not cooperative with investigators. Swartz initially refused to provide his name, date of birth and other biographical information.

On 01/10/11, SA (b)(6),(b)(7)(C) AUSA Heymann and (b)(6),(b)(7)(C) from JSTOR conducted a conference call to discuss the theft of material from JSTOR.

On 01/14/11, SA (b)(6),(b)(7)(C) Detective (b)(6),(b)(7)(C) and AUSA Heymann met at the MIT office of General Counsel with (b)(6),(b)(7)(C) counsel for MIT.

JUDICIAL ACTION:

On 01/06/11, Aaron Swartz was arrested by MIT Police Department and charged with violation of Massachusetts General Law (MGL) Chapter 266, Section 18, Breaking and Entering.

On 01/06/11, SA (b)(6),(b)(7)(C) contacted AUSA Steven Heymann, District of Massachusetts, to brief him on the above investigation.

On 01/07/11, Aaron Swartz was arraigned in Cambridge, MA District Court for violation of MGL Chapter 266, Section 18, Breaking and Entering. The case was assigned docket number 1152CR0073.

All, Det (b)(6),(b)(7)(C) is working to re interview the reporting party, I will check on status in the AM. The student who saw Swartz in the student center is coming to view a photo array sometime tomorrow. Harvard Police is checking for any reports they have on Swartz and what is his job at Harvard, I should have any info in the morning. I also should have camera footage of the student center that might show Swartz entering W-20 after he cleaned out his equipment from building 16 on and reinstalled same on Thursday (b)(6), here is my cell (b)(6),(b)(7)(C) I would like to set a meeting with you, Sgt. (b)(6),(b)(7) and (b)(6),(b)(7) to discuss a game plan. I will call Middlesex ADA to get a time when we can have a sit down with him also. (b)(6).

All, Det (b)(6),(b)(7)(C) is working to re interview the reporting party, I will check on status in the AM. The student who saw Swartz in the student center is coming to view a photo array sometime tomorrow. Harvard Police is checking for any reports they have on Swartz and what is his job at Harvard, I should have any info in the morning. I also should have camera footage of the student center that might show Swartz entering W-20 after he cleaned out his equipment from building 16 on and reinstalled same on Thursday (b)(6), here is my cell (b)(6),(b)(7)(C) I would like to set a meeting with you, Sgt (b)(6), and (b)(6),(b)(7)(C) to discuss a game plan. I will call Middlesex ADA to get a time when we can have a sit down with him also. (b)(6)

Subject: RE: Confirming Interviews on Friday

Steve -

Friday does work for us, although it might be easier to start at 11:00 (our conference room is booked from 9:30 to 11:00). Hopefully that's okay.

I have been in contact with the folks in IS&T and they came up with a slightly different list of names of people you'd probably want to speak with. They suggested (b)(6),(b)(7)(C) and (b)(6),(b)(7) they've advised me that (b)(6),(b)(7)(C) would likely be able to provide the same information that (b)(6),(b)(7)(C) and (b)(6),(b)(7) could provide. Also, (b)(6),(b)(7)(C) advised me that he probably can't provide much information beyond what you could get from (b)(6),(b)(7)(C). (b)(6),(b)(7)(C) If you still want to speak to everyone, I'm sure we can make it work, but I just want to be sure we're being as efficient as possible. Let me know your thoughts.

We can hold the meeting in the Office of General Counsel conference room, located in room 10-370. To get here, walk through the main entrance of 77 Massachusetts Avenue. You will enter a large lobby (known as Lobby 7) and see a long corridor directly in front of you (known as the Infinite Corridor). Follow the Infinite Corridor until you enter another large open lobby, known as Lobby 10 (you will see a large set of doors on the right that look out onto a large quad facing the Back Bay, called Kilian Court). When you're in Lobby 10, there will be two elevators on your left (to further confuse things, you may see a sign that says "Lobby 13" with an arrow, but you're in Lobby 10 at that point). Take either of the elevators to the third floor. When you exit the elevators, immediately turn left and you will see a sign for the Office of the General Counsel. Follow the hallway until you see another sign for the entrance to the Office of the General Counsel.

I'm in meetings the bulk of today, so I will be somewhat inaccessible, but we can coordinate any additional details tomorrow.

U. S. SECRET SERVICE INVESTIGATIVE REPORT

FROM: BOSTON FIELD OFFICE **FILE:** J-102-775-60071-S
TO: CRIMINAL INVESTIGATIVE DIVISION **X-REF:** N/A
INFO: INVESTIGATIVE SUPPORT DIVISION **SEIZURE#:** N/A

SUBJECT: NOTIFICATION OF STATE ARREST
AARON H. SWARTZ - DATE OF ARREST : 01/06/11

ACTUAL LOSS: \$TBD **POTENTIAL LOSS:** \$50,000.00

STATUTES VIOLATED: BRAKING AND ENTERING C266 S18

CASE TITLE: AARON SWARTZ
CASE TYPE: 775.426 - UNAUTHORIZED ACCESS UNIVERSITIES
SECONDARY TYPES: 848.191, 848.304, 848.930
CONTROLLING OFFICE: BOSTON FIELD OFFICE
REPORT MADE BY: SA (b)(6),(b)(7)(C)
DATE CASE OPENED: 01/07/11
PREVIOUS REPORT: N/A
REPORTING PERIOD: 01/04/11 - 01/10/11
STATUS: CONTINUED

SYNOPSIS:

Aaron Swartz was arrested by MIT Police and agents of the New England Electronic Crimes Task Force for breaking and entering.

Case continued in Boston.

DETAILS OF INVESTIGATION:

On 09/26/10 at approximately 12:31 (b)(6),(b)(7)(C) the MIT (b)(6),(b)(7)(C) (b)(6),(b)(7)(C) received an email from (b)(6),(b)(7)(C) the JSTOR (b)(6),(b)(7)(C) stating that at 0800 excessive downloading of journals had been detected from MIT and that all of MIT access to JSTOR would be blocked. JSTOR converts printed scholarly journals into electronic form and stores them in a central archive that can be accessed by libraries and institutions such as MIT

drive unattended, under a table, powered on and connected to the MIT network by a cable. Using gloves SA (b)(6),(b)(7)(C) examined the netbook. The netbook appeared to be frozen halfway in the shutdown state and all attempts to access a terminal on the machine were unsuccessful. It was determined it would not be possible to conduct live forensics or capture a snapshot of the memory of the computer in its current state. The laptop was placed in an evidence bag and turned over to MIT Police to be inventoried into evidence.

Also on 01/06/11, SA (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) traveled to Cambridge Police Headquarters to interview Swartz. At Cambridge Headquarters SA (b)(6),(b)(7)(C) met Philip G Cormier (b)(6),(b)(7)(C) (goodcormier.com). Cormier informed SA (b)(6),(b)(7)(C) that he represented Swartz and that his client would not make a statement.

JUDICIAL ACTION:

On 01/06/11, Aaron Swartz was booked by Cambridge Police Department for violation of Massachusetts General Law chapter 266 section 18, Breaking and Entering in the daytime for felony.

On 01/07/11, Aaron Swartz was arraigned in Cambridge District court for violation of MGL C266 S18, breaking and entering and his case was assigned docket number 1152CR0073.

SUSPECTS / DEFENDANTS:

Hey (b)(6) - just saw this - it's (b)(6),(b)(7)(C) @haka.org>. I'm hoping to have the pcap/flows/video/logs all in by to me Monday, possibly sooner - if you don't already have a copy of the video or pcap, I'll make sure you get one.

Have a good weekend -

I am an agent with the U.S. Secret Service in the Boston Field Office. I am investigating the theft of property from JSTOR through an unauthorized intrusion into the MIT network. I was given your contact information from (b)(6),(b)(7)(C). Could you please estimate for me the monetary value of the documents that may have been downloaded by Aaron Swartz from November of 2010 until yesterday?

Timeline of JSTOR-related events

It becomes clear that this is willful and intentional abuse for possible purpose of spidering JSTOR

without being identified. All bogus host registrations are disabled.

Wed 10/13/10 | 3:12pm (b)(6),(b)(7)(C) emails (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) with the information that it appears to be the same unknown person

using our guest registration capability from a wired connection in building 16.

Wed 10/13/10 | 3:42pm (b)(6),(b)(7)(C) responds to (b)(6),(b)(7)(C) and Security team that she will pursue the Libraries moving to the proxy/econtrol system for accessing JSTOR.

Wed 10/13/10 | 10:41pm (b)(6),(b)(7)(C) sends email to (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) that the offending machine is no longer seen on the network.

Thu 10/14/10 | 10:47am (b)(6),(b)(7)(C) emails (b)(6),(b)(7)(C) to inquire as to whether JSTOR is still seeing continued excessive downloading.

Voices support for the Libraries to move to econtrol/proxy system for MIT's access to JSTOR.

Thu 10/14/10 | 5:05pm (b)(6),(b)(7)(C) emails (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) to let us know of JSTOR's wanting some sort of indication that we've identified the user or any expectation of being able to identify in the future.

Thu 10/14/10 | 9:09pm (b)(6),(b)(7)(C) responds to (b)(6),(b)(7)(C) email with reasons for difficulties of identifying random guest user making attempts to thwart detection when using our wired network.

Thu 10/14/10 | 11:26pm (b)(6),(b)(7)(C) asks (b)(6),(b)(7)(C) for any updates to share with (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C)

Thu 10/14/10 | 11:33pm (b)(6),(b)(7)(C) emails facts of case to date to (b)(6),(b)(7)(C) around extreme robotic activity of JSTOR at MIT.

Fri 10/15/10 | 1:31am (b)(6),(b)(7)(C) emails (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) to keep eye out for the host so their physical location can be determined if they show up again.

Fri 10/15/10 | 11:26am (b)(6),(b)(7)(C) forwards email from JSTOR to MIT Security team; JSTOR would like assurances that we could monitor for this type of behavior. (b)(6),(b)(7)(C) responds to JSTOR that it is not technically feasible

for us to do that kind of monitoring. I point out that JSTOR has many more capabilities than we do to facilitate that kind of monitoring.

Meanwhile, there are emails between (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) that speak to risk management and protection, both technically and practically, of our own assets and resources against this type of threat.

Fri 10/22/10 | 4:48pm (b)(6), (b)(7) from JSTOR sets up conference for 10/26 with (b)(6), (b)(7) from JSTOR (b)(6), (b)(7) and (b)(6), (b)(7)

Tue 10/26/10 | 2:00pm Conference call with JSTOR; next moves to econrol/proxy system for authentication to JSTOR was discussed. (b) sends email with update and next steps: JSTOR will make landing page to smooth access for users who try to access JSTOR directly from MIT's network rather than using proxy. Libraries would then go ahead and communicate with users (drafts were already ready). Proxy server configuration changes would be made. JSTOR would be contacted and would change the list of permitted IPs to only MIT's proxy servers.

Mon 11/29/10 | 6:47pm Security team receives notice from IEEE that journal spidering is occurring on their site. It is tracked to the SIPB XVM cluster, a group of computers that are shared and that anyone in the MIT community can host a Virtual Machine on.

Tue 11/30/10 | 2:40am The user running the Virtual Machine on SIPB's cluster is notified; his Virtual Machine had been compromised and scripts placed on it that were downloading journals from JSTOR, IEEE and APS. The machines were taken offline.

Mon 01/03/11 | 10:49am (b)(6), (b)(7) receives email forwarded via (b) from (b)(6), (b)(7) at JSTOR regarding an incident on 12/26 at 9pm of (b)(6), (b)(7) excessively downloading JSTOR journals again; surprising, as under impression that authentication had been set up and proxy was being used. Discovers that hold-up has been JSTOR's difficulties with setting up landing page to make it easier for our users.

Tue 01/04/11 | 1:34am (b)(6), (b)(7) pings (b)(6), (b)(7) regarding incident; (b) had starting to look into incident at that time. Can find zero information regarding this IP address, not even bogus guest registration data as found before. Started email reply to (b)(6), (b)(7) then started examining older emails - all former abuses had come from 18.55. With recent network infrastructure access and tools given to Security team to enable self-sufficient discovery/protection of network and users, more investigation into the (b)(6), (b)(7) address and its possible physical location was pursued.

The user was now not using any of the typical methods to access MIT-net to avoid all usual methods of being disabled, including assigning himself an additional IP address. (b)(6), (b)(7)(C)

so communication wouldn't be interrupted if we disabled (b)(6),(b)(7)(C) which had been doing the downloading.

Tue 01/04/11 | 2:49am (b)(6),(b)(7)(C) sends email to (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) containing findings to see if they could further pinpoint location in building 16.

Tue 01/04/11 | 3:24am (b)(6),(b)(7)(C) sends email to (b)(6),(b)(7)(C) with update, concurs that move to econtrol/proxy system is prudent, and that further information should be known with (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) help.

Tue 01/04/11 | 3:42am (b)(6),(b)(7)(C) emails (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) with copy of email to (b)(6),(b)(7)(C) and copy of email to (b)(6),(b)(7)(C).

Tue 01/04/11 | 8:08am (b)(6),(b)(7)(C) emails (b)(6),(b)(7)(C) with news that he's found the offending computer; an Acer netbook hidden under a box in the network closet in the basement of building 16. Under the netbook is an external hard drive.

(b)(6),(b)(7)(C) arrives to assist (b)(6),(b)(7)(C). Traffic to/from the netbook is captured on (b)(6),(b)(7)(C) laptop. The only traffic destined for the netbook is a single ping from Chinese address space.

9:44am (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) talk via phone. (b)(6),(b)(7)(C) calls (b)(6),(b)(7)(C) to advise and for counsel around legality of possibly having MIT police seize laptop.

(b)(6),(b)(7)(C) is notified by (b)(6),(b)(7)(C) and notifies MIT police.

10:30am (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) join (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) in building 16, along with two MIT uniformed officers who are guarding scene. We are told that Det. (b)(6),(b)(7)(C) has notified Cambridge police who are en route.

~11:00am Det. (b)(6),(b)(7)(C) arrives with additional uniformed officers, Det. (b)(6),(b)(7)(C) Crime Scene Investigators and USSS Agent (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) detail events. (b)(6),(b)(7)(C) handles computer forensics for the Secret Service.

CSI folks fume for prints and photograph the scene. Prints are found and lifted from netbook.

Scene is released for further investigation.

(b)(6),(b)(7)(C) arrives with an IP-based video camera for surveillance after it's decided, at the recommendation of (b)(6),(b)(7)(C) that the netbook be left in place to continue to monitor traffic to/from it. At that time, it is observed that the netbook is still reaching out

to

JSTOR and downloading journals.

It was also observed that connections were now being made to the computer from an IP address in China. (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) arrive to assist.

~12:30pm (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) stop by General Counsel's office to advise MIT's counsel of law enforcement's presence on campus and discuss what data is in-scope to provide them for the investigation that OI has stewardship over. (b)(6),(b)(7)(C) advises that turning over this evidence poses no violation of rights.

~1:30pm (b)(6),(b)(7)(C) and SA (b)(6),(b)(7)(C) continue to observe netbook; two open ports are discovered on netbook, both allowing for remote access. Strategy is determined for continual monitoring of traffic to/from the netbook. Camera is set up; (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) restore scene to original condition as it had been discovered.

~2:30pm Paths diverge; (b)(6),(b)(7)(C) and SA (b)(6),(b)(7)(C) return to N42.

~3:00pm (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) speak with (b)(6),(b)(7)(C) to verify specific data to be turned over to Secret Service is within scope of investigation and poses no legal risks.

(b)(6),(b)(7)(C) provides SA (b)(6),(b)(7)(C) with historical network flow data concerning 18.55.6.240 & 7.240 dating from 12/14 until present and relevant DHCP log information from prior occurrences of ghost-macbook and ghost-laptop JSTOR downloading incidents (from Sept. and Oct.).

~3:00pm Scene is restored to the way it was found and all involved clear out from building 16.

3:26pm Suspect is seen on camera entering network closet, noticeably unaware of what had occurred all morning.

He's observed swapping out the external hard disk drive with a different one. He left before police could arrive. On his way out, the suspect shuts off the lights. As this will hurt video quality and possibly work against the motion activation of the camera, (b)(6),(b)(7)(C) returns to closet and turns lights back on.

~4:00pm SA (b)(6),(b)(7)(C) leaves campus; (b)(6),(b)(7)(C) calls (b)(6),(b)(7)(C) to inquire if he needs anything further. (b)(6),(b)(7)(C) is waiting to hear of location to transmit captured network traffic to for further analysis.

Thu 01/06/11 | 12:32pm Suspect enters network closet while covering his face with bike helmet, presumably thinking video cameras

may be in hallway. Once inside and with the door closed, he hurriedly removes his netbook, hard drive, and network cable and stows them in his backpack. While leaving, he covers his face again with the helmet and is out within 2 minutes with not enough time for police to respond to the area quickly enough to apprehend.

2:15pm (b)(6),(b)(7)(C) (b)(6),(b)(7)(C) at home, calls (b)(6),(b)(7)(C) seeing 2nd IP address that had been used by laptop, in use on the 4th floor of building 16. (b)(6),(b)(7)(C) verifies location of IP address. The MAC address was different, however the suspect had been observed in the past changing his MAC address. It is plausible, given the circumstance, that the laptop was moved up there when it had been removed from the basement.

2:22pm (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) drive to building 16 to attempt to recover the netbook. (b)(6),(b)(7)(C) calls (b)(6),(b)(7)(C) on the way to inform him and for police presence while the attempt is made to locate the netbook. (b)(6),(b)(7)(C) informs them that he and SA (b)(6),(b)(7)(C) had just apprehended the suspect near Central Square attempting to flee. Detective (b)(6),(b)(7)(C) joins us with a uniformed officer.

~2:40pm (b)(6),(b)(7)(C) is called and joins us quickly in 16 to aid in tracing the punched-down wires in the TR to the possible location of the netbook. The netbook could not be located on the 4th floor; instead, a Dell laptop in an office belonging to students is identified as having leased the (b)(6),(b)(7)(C) address, by happenstance, after the suspect's netbook stopped using it.

~3:15pm The group returns to W92. The netbook had been using a statically assigned IP address, however, because it moved, it was possible that it had been reconfigured to use DHCP services for network access. (b)(6),(b)(7)(C) checks today's DHCP logs for "ghost", part of the laptop's name that had been used over the past months. ghost-laptop is seen in the logs, with the same MAC address that had been used on Tuesday. (b)(6),(b)(7)(C) verifies that the netbook is still active on the network. (b)(6),(b)(7)(C) finds the netbook seems to be on the network in building W20 on the 5th floor. The log shows:

Jan 6 12:48:31 wall-street dhcpd: DHCPOFFER on 18.53.6.12 to 00:4c:e5:a0:c7:56 (ghost-laptop) via 18.53.0.1

Jan 6 13:27:01 installer dhcpd: DHCPOFFER on 18.187.7.213 to 00:4c:e5:a0:c7:56 (ghost-laptop) via 18.187.0.1

At 12:42 the netbook was re-registered on the network in building 4, 8 minutes after being picked up from building 16. 39 minutes later, at 1:26, it was plugged into a network jack in building W20.

3:20pm (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) arrive at W20. The network closet is examined and jack location determined. (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) determine the network drop location is in the SIPB office, room 557.

3:42pm (b)(6),(b)(7)(C) calls Det. (b)(6),(b)(7)(C) to request police presence prior to the group entering the SIPB offices to check the room for the netbook.

4:00pm Det. (b)(6),(b)(7)(C) and SA (b)(6),(b)(7)(C) arrive outside W20 room 557. The students present are asked by Det. (b)(6),(b)(7)(C) if they saw anyone drop off a silver laptop computer; they all respond they'd only been there ~15-20 minutes and had seen no computer. The room is searched by all - (b)(6),(b)(7)(C) locates the laptop, neatly placed under a table in a corner abutting a filing cabinet. The netbook is plugged in to a network jack about 6 feet away and is sitting on an external hard drive, attached, the same way it had been when in building 16.

SA (b)(6),(b)(7)(C) dons gloves and proceeds to examine the netbook. It appeared to be in a halfway shutdown state and all attempts to access a terminal on the machine were unsuccessful. It was determined that there was no feasible way to do live forensics on the computer in an attempt to capture a snapshot of current memory. The laptop is shutdown and bagged as evidence. SA (b)(6),(b)(7)(C) placed a call to the Cambridge police to inquire about getting another fingerprint exam for the netbook.

4:45pm The group returns to W92 and meets with (b)(6),(b)(7)(C) to debrief.

5:30pm (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) go to (b)(6),(b)(7)(C) office to join a conference call with (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) to brief them on the technical details of the work, the staff involved and sequence of events which enabled the group to locate the netbook. The call was concluded ~6:00.

A rough approximation of MIT's staff's time spent on incident since September: 160 hours in aggregate.

STATUTES VIOLATED: BRAKING AND ENTERING C266 S18

CASE TITLE: AARON SWARTZ
CASE TYPE: 775.426 - UNAUTHORIZED ACCESS UNIVERSITIES
SECONDARY TYPES: 848.191, 848.304, 848.930
CONTROLLING OFFICE: BOSTON FIELD OFFICE
REPORT MADE BY: SA (b)(6),(b)(7)(C)
DATE CASE OPENED: 01/07/11
PREVIOUS REPORT: N/A
REPORTING PERIOD: 01/04/11 - 01/10/11
STATUS: CONTINUED

SYNOPSIS:

Aaron Swartz was arrested by MIT Police and agents of the New England Electronic Crimes Task Force for breaking and entering

Case continued in Boston.

DETAILS OF INVESTIGATION:

On 01/04/11, Detective (b)(6),(b)(7)(C) of the Cambridge Police Department and a member of the New England Electronic Crimes Task Force received a call from the (b)(6),(b)(7)(C) (MIT.EDU) of Massachusetts Institute of Technology Police that an unauthorized computer had been found in a wire closet on MIT grounds and Network Traffic suggested that the computer was being used to download technical journals. The computer was found in a wire closet of in the basement of Building

16, the Dorrance Building (77 Massachusetts Avenue) which has MIT Biological Engineering Department.

Also on 01/04/11, SA (b)(6),(b)(7)(C) Detective (b)(6),(b)(7)(C) and Detective (b)(6),(b)(7)(C) (b)(6),(b)(7)(C) of the Boston Police traveled to MIT and met with (b)(6),(b)(7)(C) (b)(6),(b)(7)(C) (mit.edu) of the MIT Police, (b)(6),(b)(7)(C) (b)(6),(b)(7)(C) (mit.edu) (b)(6),(b)(7)(C) Consultant for MIT IT Security Systems & Services and (b)(6),(b)(7)(C) (b)(6),(b)(7)(C) (mit.edu) (b)(6),(b)(7)(C) for Network and Infrastructure Services for MIT. (b)(6),(b)(7)(C) stated that on 01/03/11 the library had notified him that someone was downloading large numbers of journals from the library without authorization. Large amounts of unauthorized downloading was first noticed by the library on 09/29/10 and on 11/23/10 there was another incident of excessive downloading. (b)(6),(b)(7)(C) was able to trace the activity to a particular switch in the wire closet. When (b)(6),(b)(7)(C) went to examine the wire closet he found the unauthorized computer connected to the switch. An external hard drive was connected to the network. The netbook was an Acer Aspire One with a serial number LUSAX0D001001100E1601. The netbook matches the description of an Acer netbook (b)(6),(b)(7)(C) reported as stolen to MIT Police on 12/31/10. The netbook appeared to be using two IP address (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) which are IP address belonging to MIT. Use of NMap showed that the netbook had port 22 and 8092 open. Port 22 is the default port for SSH (Secure Shell network protocol) and port 8092 that is often associated with TCP (Transmission Control Protocol) traffic. Cambridge Police processed the scene for prints. A surveillance camera was placed in the wire closet to record anyone returning for the netbook.

Also on 01/04/11, at approximately 1526, the surveillance camera was able to record a white male later identified as Aaron Swartz (DOB 11/08/86) enter the wire closet. Based on the surveillance video Swartz appeared to replace the external hard drive with a new one and take the old hard drive with him.

Also on 01/04/11, (b)(6),(b)(7)(C) provided SA (b)(6),(b)(7)(C) with a copy of flow traffic from the MIT network. SA (b)(6),(b)(7)(C) contacted SA (b)(6),(b)(7)(C) (CID) at the CERT Coordination Center at the Software Engineering Institute at Carnegie Mellon University. SA (b)(6),(b)(7)(C) provided SA (b)(6),(b)(7)(C) with instructions to upload the data to the CERT drop box.

On 01/06/11, at approximately 1232, video surveillance viewed Swartz return to the wire closet and remove the netbook and external hard drive. At approximately 1411 (b)(6),(b)(7)(C) of the MIT police Department called (b)(6),(b)(7)(C) of the MIT Police and stated that he had located Swartz riding his bicycle on Massachusetts Avenue near the intersection with Lee Street in Cambridge Massachusetts. (b)(6),(b)(7)(C) and SA (b)(6),(b)(7)(C) responded to Lee Street to assist (b)(6),(b)(7)(C) attempted to interview the Swartz however; Swartz jumped off of his bicycle and ran down Lee Street. (b)(6),(b)(7)(C) and SA (b)(6),(b)(7)(C) detained Swartz. Swartz was transported by Cambridge Police to Cambridge Police headquarters to be booked for Breaking and Entering.

Also on 01/06/11, (b)(6),(b)(7)(C) (b)(6),(b)(7)(C) edu) and (b)(6),(b)(7)(C) contacted (b)(6),(b)(7)(C) to inform him that they found that the signature of the same Acer Aspire netbook had been discovered again coming from the Stratton Student Center. SA (b)(6),(b)(7)(C) met (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) at the student center and found the Acer Aspire netbook and external hard drive under a table, powered on and connected to the MIT LAN by a RJ-45 cable. The laptop was placed in an evidence bag and turned over to MIT Police to be inventoried into evidence.

DISPOSITION:

Case continued pending further investigation.

This is from a few years back -- in the first 30 seconds of this video:

<http://blogs.law.harvard.edu/mediaberkman/2007/10/25/aaron-swartz-on-the-open-library-2/>

Really intelligent kid that just got buried under an avalanche of dumb.

For the ultimate irony, check out that video again: just before the second picture-in-picture they cut to, 4 or so minutes in... "we want to be able to say, 'oh, just down the street there's a library that has a copy; go visit them'... this allows us to pull people into physical libraries. Our motto is, kind of on the side of every book, we have a little option where you can buy, borrow or down- steal.. err download, I guess."

No wonder he didn't talk at all -- seems like he might be quite familiar with how questioning works... that, and he hangs out with

Americans have grown accustomed to finding just about anything they want online fast, and free. But for those searching for federal court decisions, briefs and other legal papers, there is no Google.

Instead, there is Pacer, the government-run Public Access to Court Electronic Records system designed in the bygone days of screechy telephone modems. Cumbersome, arcane and not free, it is everything that Google is not.

Pacer is just so awful," said Carl Malamud, the leader of the effort and founder of a nonprofit group, Public.Resource.org. "The system is 15 to 20 years out of date."

Worse, Mr. Malamud said, Pacer takes information that he believes should be free — government-produced documents are not covered by copyright — and charges 8 cents a page. Most of the private services that make searching easier, like Westlaw and Lexis-Nexis, charge far more, while relative newcomers like AltLaw.org, Fastcase.com and Justia.com, offer some records cheaply or even free. But even the seemingly cheap cost of Pacer adds up, when court records can run to thousands of pages. Fees get plowed back to the courts to finance technology, but the system runs a budget surplus of some \$150 million, according to recent court reports.

To Mr. Malamud, putting the nation's legal system behind a wall of cash and kludge separates the people from what he calls the "operating system for democracy." So, using \$600,000 in contributions in 2008, he bought a 50-year archive of papers from the federal appellate courts and placed them online. By this year, he was ready to take on the larger database of district courts.

Those courts, with the help of the Government Printing Office, had opened a free trial of Pacer at 17 libraries around the country. Mr. Malamud urged fellow activists to go to those libraries, download as many court documents as they could, and send them to him for republication on the Web, where Google could get to them.

Aaron Swartz, a 22-year-old Stanford dropout and entrepreneur who read Mr. Malamud's appeal, managed to download an estimated 20 percent of the entire database: 19,856,160 pages of text.

Then on Sept. 29, all of the free servers stopped serving. The government, it turns out, was not pleased.

A notice went out from the Government Printing Office that the free Pacer pilot program was suspended, "pending an evaluation." A couple of weeks later, a Government Printing Office official, Richard G. Davis, told librarians that "the security of the Pacer service was compromised. The F.B.I. is conducting an investigation."

Recently, however, a small group of dedicated open-government activists teamed up to push the court records system into the 21st century — by simply grabbing enormous chunks of the database and giving the documents away, to the great annoyance of the government.

Lawyers for Mr. Malamud and Mr. Swartz told them that they appeared to have broken no laws, noting nonetheless that it was impossible to say what angry government officials might do.

At the administrative office of the courts, a spokeswoman, Karen Redmond, said she could not comment on the fate of the free trial of Pacer, or whether there had been a criminal investigation into the mass download.

The free program "is not terminated," Ms. Redmond said. "We'll just have to see what happens after the evaluation." As for the system's cost, she said: "We're about as cheap as we can get it. We're talking pennies a page."

Meanwhile, the 50 years of appellate decisions remain online and Google-friendly, and the 20 million pages of lower court decisions are available in bulk form, but are not yet easily searchable. "I want the whole database in 2009," Mr. Malamud said.

Mr. Malamud, 49, has a long record of trying to balance openness with privacy, and has also pushed the Securities and Exchange Commission and the Patent and Trademark Office to put their records online free. But the issue is a thorny one with court documents, which often contain personal information.

Daniel J. Solove, a professor at the George Washington University Law School, noted that marketers skim court records for personal data, and making records easier to troll will put even more data at risk. "It's taking away this middle ground that offered a lot of protection, practically, and throwing it into this radically wide open box," he said.

But this argument for what is known as "practical obscurity" does not convince Peter A. Winn, a privacy expert who is an assistant United States attorney in Washington State. Noting that he was speaking only for himself, he argued that the courts developed rules over the last 400 years to protect privacy.

"It worked in the bricks-and-mortar age — it should work in the electronic age," Mr. Winn said. The administrative office of the courts, he said, should take on the role of policing privacy on its databases. "This is going to take focus and a lot of hard work," he said.

Mr. Malamud agrees that the court system needs to do a better job of protecting privacy. He found thousands of documents in which the lawyers and courts had not properly redacted personal information like Social Security numbers, a violation of the courts' own rules. There was data on children in Washington, names of Secret Service agents, members of pension funds and more.

"They're pretty spectacular blunders," he said. He sent letters to the clerks of individual courts around the country. After some initial inaction, and repeated and increasingly spirited notices

from Mr. Malamud, most of the offending documents were pulled from the databases to be redacted.

Ms. Redmond, of the administrative office of the courts, said the courts comb through the documents "on a regular basis" and tell lawyers to redact confidential information. The number of violations, she noted, was relatively small.

Mr. Malamud scoffed at that. "This is a large number of transgressions, and this is illegal," he said. "The law doesn't say that you should only publish a small number of Social Security numbers!"

Mr. Malamud said his years of activism had led him to set a long-shot goal: serving in the Obama administration, perhaps even as head of the Government Printing Office. The thought might seem far-fetched — Mr. Malamud is, by admission, more of an at-the-barricades guy than a behind-the-desk guy. But he noted that he published more pages online last year than the printing office did.

Mr. Malamud represents a perspective of openness and transparency that is much in tune with the new administration's, said Lawrence Lessig, a law professor at Harvard who is a leading advocate for free culture. "The principles are those that Carl has been at the center of defining," he said.

The idea also seems to have a measure of appeal for John D. Podesta, a longtime fan of Mr. Malamud and head of the Obama transition team, who stopped short, however, of anything resembling an endorsement. "He would certainly shake things up," Mr. Podesta said, laughing.

Mr. Malamud says he is not counting on the new administration's being quite that bold. Besides, he said, he keeps himself awfully busy doing what he believes the government ought to be doing anyway.

"If called, I will certainly serve," he said. "But if not called, I will probably serve anyway."

Just wanted to check in regarding potentially recovering the hard drive that was reported seen, on the video feed, being swapped out by the suspect on Tuesday; may/may not be moot at this point if he's already been bailed out, but I'd think that's where a lot of the JSTOR property might be sitting.

I'm super impressed with all the good work that went into this coming together. Hopefully it works like this most of the time for you all.

Subject of FBI Investigation Reveals Government Concerns About Access to Federal Courts' Public PACER System

Posted on October 6, 2009 by [Aaron Wright](#)

Reddit co-founder Aaron Swartz was apparently the subject of an FBI investigation for "participating in a project to take the publicly owned US court records from the PACER database (where they were very expensive to access) and put them on the web."

Mr. Swartz has made this information public by releasing the contents of his FBI file, obtained through a Freedom of Information Act request. His file reveals that the FBI was treating his access of PACER as a crime which cost the victim, the Administrative Office of the US Courts, approximately \$1.5 million. The file suggests, but does not explicitly state, that the crime may have been a violation of the Computer Fraud and Abuse Act (18 U.S.C. §1030), as the FBI apparently asked the Administrative Office of the US Courts how Mr. Swartz would have known his access was unauthorized.

The FBI closed its investigation of Mr. Swartz without filing charges. The investigation of Swartz's activity, coupled with questions about what constitutes accessing a computer "without authorization" under anti-hacking statutes (as I previously discussed [here](#)), suggests that future efforts to open the PACER system (as well as existing efforts, like RECAP) may meet with some government resistance.

For more on efforts to make the PACER system more accessible to the public see our previous posts on the subject.

Subject: FBI Investigated Coder for Liberating Paywalled Court Records

FBI Investigated Coder for Liberating Paywalled Court Records

- By [Ryan Singel](#) 
- October 5, 2009 |
- 8:48 pm |
- Categories: [Sunshine and Secrecy](#), [The Ridiculous](#)

When 22-year-old programmer Aaron Swartz decided last fall to help an open-government activist amass a public and free copy of millions of federal court records, he did not expect he'd end up with an FBI agent trying to stake out his house.

But that's what happened, as Swartz found out this week when he got his FBI file through a Freedom of Information Act request. A partially-redacted FBI report shows the feds mounted a serious investigation of Swartz for helping put public documents onto the public web.

The FBI ran Swartz through a full range of government databases starting in February, and drove by his home, after the U.S. court system told the feds he'd pilfered approximately 18 million pages of documents worth \$1.5 million dollars. That's how much the public records would have cost through the federal judiciary's pay-walled PACER record system, which charges eight cents a page for most legal filings.

"I think its pretty silly they go after people who use the library to try to get access to public court documents," Swartz said. "It is pretty silly that instead of calling me up, they sent an FBI agent to my house."

The feds also checked Swartz's Facebook page, ran his name against the Department of Labor to figure out his work history, looked for outstanding warrants and prior convictions, checked to see if his mobile phone number had ever come up in a federal wiretap or pen register, and checked him against the records in a private data broker's database.

399diggsdigg:

The Great Court Records Caper began last year when the judiciary and the Government Printing Office experimented with giving away free access to PACER at 17 select libraries around the country. Swartz decided to use the trial to grab as many of the public court records as he could and, perversely, release them to the public.

He visited one of the libraries — the 7th U.S. Circuit Court of Appeals library in Chicago — and installed a small PERL script he'd written. The code cycled sequentially through case numbers, requesting a new document from PACER every three seconds. In this manner, Swartz got nearly 20 million pages of court documents, which his script uploaded to Amazon's EC2 cloud computing service.

Or, as the FBI report put it, the public records were "exfiltrated."

The script ran for a couple of weeks — from September 4 to 22, until the court system's IT department realized something was wrong. Someone was downloading *everything*. None of the records, of course, were private or sealed, and Lexis Nexis has a copy of of PACER's database that it sells a high markup. But Swartz wasn't paying anything.

The Government Printing Office abruptly shut down the free trial and reported to the FBI that PACER was "compromised," the FBI file reveals. The Administrative Office of the U.S. Courts told the FBI in March that Swartz had gained unauthorized access to the free PACER account.

"AARON SWARTZ would have known his access was unauthorized because it was with a password that did not belong [sic] to him," reads the FBI report summarizing the judiciary's position.

Swartz says his script only ran on the library computer. It didn't use a password at all, but used the PACER authentication cookie set in the PC's browser.

He donated the 19,856,160 pages to public.resource.org, an open government initiative spearheaded by Carl Malamud as part of a broader project to make public as many government databases as Malamud can find. It was Malamud who previously shamed the SEC into putting all its EDGAR filings online in the '90s, and he used \$600,000 in donations to buy 50 years of documents from the nation's appeals court, which he promptly put on the internet for anyone to download in bulk.

The Washington bureau of the FBI opened their investigation of Swartz just a week or so before the *New York Times* published its account of the caper. The bureau didn't contact him then, but in April, the FBI asked to interview the code jock — saying it needed his help to close the "security hole" he'd exploited. When Swartz declined, on the advice of counsel, the feds dropped the investigation after the Justice Department's Computer Crime and Intellectual Property Section closed the case.

Swartz, a former employee of Reddit — a sister company of Wired.com — requested his FBI file in August, and describes it as the "usual mess of confusions that shows the FBI's lack of sense of humor." (Threat Level notes that the FBI's filled Swartz's FOIA request at an admirable speed that would have been unheard of as recently as last year.)

R I F

That's how Swartz learned that a Chicago-based FBI agent got Swartz's driver's license photo, and considered a stakeout of his home. But any surveillance, the agent concluded, would be conspicuous, since so few cars were parked on Swartz's dead-end street in Highland Park, Illinois.

The feds evidently identified Swartz in the first place by approaching Amazon, which provided his name, phone number and address. It's not clear if the feds got a subpoena to learn his identity, but they may not have needed one; Amazon's user agreement for its cloud computing solutions gives it the right to turn over customer information to the government on request.

Amazon did not reply to a call and online request for comment.

Two months after opening an investigation, the feds finally called Swartz on April 14. He declined to speak to them, and demurred again through his lawyer two days later.

The investigation was closed on April 20.

PACER records still cost eight cents a page, but now PACER users running the Firefox browser can donate their downloads to the public domain with a simple plug-in called RECAP.

Use of the plug-in is not likely to start an investigation of you.

But then again, who knows.

Subject: Aaron Swartz

Aaron Swartz, co-founder of Reddit, was investigated by the FBI for participating in a project to take the publicly owned US court records from the PACER database (where they were very expensive to access) and put them on the web. He's requested his FBI file and put it on the web:

AARON SWARTZ has a profile on the website LINKEDIN, at www.linkedin.com/in/aaronsw. SWARTZ is listed as a writer, hacker and activist based in the San Francisco Bay Area. SWARTZ's education includes Stanford University, Sociology, 2004. SWARTZ's experience includes the following:

SWARTZ has a profile on the website FACEBOOK. His networks include Stanford '08 and Boston, MA. The picture used in his profile was also used in an article about SWARTZ in THE NEW YORK TIMES.

SWARTZ's personal webpage, www.aaronsw.com, includes a section titled "Aaron Swartz: a life time of dubious accomplishments". In 2007, SWARTZ began working full-time as a member of the Long-Term Planning Committee for the Human Race (LTPCHR).

February 19, Manassas, VA:

On February 17, 2008 [sic], SA [REDACTED] received an email from [REACTED] Administrative Office of the US Courts, with links to two published articles regarding the compromise of the PACER system.

On February 12, 2009, [REACTED] published an article in THE NEW YORK TIMES titled "An Effort to Upgrade a Court Archive to Free and Easy". For the article, [REDACTED] interviewed [REDACTED] and AARON SWARTZ regarding the compromise of the PACER system.

Aaron Swartz Former Project Leader

The Open Library wouldn't exist without Aaron. He wrote the backbone of the system you see today. He has also worked on specs like RSS, startups like Reddit.com, and software projects like web.py. He worked from San Francisco to architect the site, put together the team, and attempt to keep things organized, and we couldn't have come this far without his crucial expertise.

Aaron Swartz: a lifetime of dubious accomplishments

[home page](#) • [life story](#) • [contact info](#)

the early years

Aaron Swartz was born in Chicago, Illinois before his parents quickly whisked him away to the northern suburb of Highland Park, where he was kept safe from the infectious effects of the lower classes for over a decade.

He was enrolled for a short time at the Creative Children's Academy but then was moved the North Shore Country Day School of Winnetka. After providing the correct answers on a standardized test he was offered a scholarship to the same school for high school, which he reluctantly accepted but only for a year.

After a year of high school he found it intolerable and refused to go back. His family told the state of Illinois that they were "homeschooling" him and he enrolled in a handful of classes at nearby Lake Forest College (Physics, Chemistry, Logic, and Number Theory) but spent most of his time on his own.

the middle years

After taking a course from Philip Greenspun, he built his first database-backed web site (based around the same idea as what is now called Wikipedia) and entered it in the ArsDigita Prize, where he received runner-up status. As part of his second project, an early web-based news aggregator, he joined the RSS-DEV working group where he co-authored the RSS 1.0 spec.

RSS 1.0 was based around a technology known as RDF, which was being developed as part of the Semantic Web project at the W3C, the standards body for the Web. Aaron learned more and more about RDF, eventually becoming a member of the RDF 1.0 Working Group, where he wrote RFC3870.

In 2002 he read an article about the Creative Commons project then being started by Lawrence Lessig. He wrote Lessig an email saying that he thought RDF would be appropriate for the project and Lessig invited him to become the project's RDF lead.

In subsequent years he became increasingly interested in the law, the major part of Creative Commons's work, and then in politics. The summer before college he became especially engaged in radical politics.

the recent years

On the recommendation of Lessig, who is a professor of law there, he was accepted to Stanford University, where he planned to study sociology. He documented his first year at Stanford extensively on his blog.

Towards the end of the year, he received an email from Paul Graham who suggested he apply for his Summer Founders Program. With Simon Carstensen, he did, and was accepted, and moved to Cambridge for the summer, where they stayed in beautiful Simmons Hall.

Simon left at the end of the summer to return to school in Denmark but Aaron decided to stay in Cambridge and take a leave of absence from Stanford after receiving several funding offers. However, he spent months trying to find a new partner and close down a funding deal, eventually giving up and merging with Steve Huffman and Alexis Ohanian of Reddit to form Not a Bug.

right now

He was a co-founder of Reddit, whose traffic doubled six times from when he joined in October 2005 to when it was purchased by Condé Nast in October 2006.

He left in early 2007 and since then has co-founded Open Library, Watchdog.net, and the Progressive Change Campaign Committee.

He is currently executive director of Demand Progress.

Aaron Swartz (born November 8, 1986) is a writer, activist, and programmer. He is currently co-founder of the Progressive Change Campaign Committee.

At age 14, he was a co-author of the RSS 1.0 specification. Since then he has become a member of the W3C's RDF Core Working Group, co-designed the formatting language Markdown with John Gruber, and has been involved in many other projects.

Swartz was the founder of Infogami, a startup that was part of Y Combinator's first Summer Founders Program. Previously, he attended Stanford University for a year, leaving to work on his company full-time. Infogami merged with reddit to form *not a bug* but failed to take off.

In late 2006, reddit was sold to CondéNet (the online arm of Condé Nast Publications and the owners of Wired) and Swartz moved with his company to San Francisco. In January 2007, Swartz was asked to resign from his position at Wired Digital.^{III}

In September 2007, Swartz, together with Simon Carstensen, launched Jottit, a website service quite similar to Infogami. Jottit was launched from bitbots.net, a project by Swartz and Carstensen. Swartz is also the creator of

the web.py web application framework, based on the Python programming language, which is used by Jottit (and previously reddit).

Swartz is an active blogger and has written a number of widely read essays on his blog. Two of his more well-known pieces are "Who Writes Wikipedia",^[2] an article examining the contributions to Wikipedia articles written during his candidacy for the Wikimedia Foundation board election in 2006, and "HOWTO: Be More Productive",^[3] an article on personal productivity.

Swartz currently lives in Cambridge, Mass. He works on watchdog.net and is on the board of Change Congress, and previously worked on Open Library.

Subject: FYI an update

FYI.

At approximately 1232 today the suspect was seen on video surveillance returning to the wire closet and taking the laptop and external drive. The suspect fled the scene before authorities could detain him. However at 1411 the suspect was identified. On Massachusetts Avenue in Cambridge. Detectives and this agent found the suspect and detained him. The suspect was arrested by MIT Police for breaking and entering. A passport in his backpack identifies the suspect as Aaron H Swartz, with a DOB of 8 NOV 86. The booking is ongoing. Swartz has made no statements yet. I am still working to find the right person to make the call for MIT if they want Federal involvement beyond my assistance.

All,

I am going to suggest that we take the laptop and hard drive offline today. I think the amount of network traffic captured is sufficient and would like to remove the laptop to see if he comes back to retrieve it. I will be able to put some people there for a short time in an attempt to ID.

I am following up a couple of possible ID's this morning and will get back to you on my success (or not).<

All,

I am going to suggest that we take the laptop and hard drive offline today. I think the amount of network traffic captured is sufficient and would like to remove the laptop to see if he comes back to retrieve it. I will be able to put some people there for a short time in an attempt to ID.

I am following up a couple of possible ID's this morning and will get back to you on my success (or not).

The open questions will be if we decide to take it offline, is this something I can do with instruction or will I need help? Also, do we want to have the new drive printed?

Hi there,

I have collected about 70G of network traffic so far with about 98% of which is the JSTOR journal downloads. I've done some initial checking of the capture and I don't see anything that identifies a command and control channel. I was just wondering what the next step is.

Thank you

I agree with taking the laptop offline today and imaging it. Any leads with identification? I wanted to look at what options we have to get a better picture of his face. I mentioned the case to our Technical Security Division Specialist. He is working on another case this morning but will be available this afternoon. Do you have any other surveillance options to capture a better image of his face?

Hi there,

So the MAC address in question is 00:4c:a5:a0:c7:56 and it looks like it was registered for a guest account on Nov 28th and has 13 days left on the registration. But it counts days in use and he is currently using a static IP address which doesn't affect that countdown. So the bottom line is that it does not look like the MAC address was previously registered by someone else.

Attached is a screen shot of our tool that looks up the MAC address registration information.

Thanks

Subject: Unauthorized Activity on MIT network

I would like to get your opinion on what offenses the suspect could be charged with in this case and what evidence would best support prosecution.

On 01/04/11 Detective (b)(6),(b)(7)(C) of the Cambridge Police Department and a member of the New England Electronic Crimes Task Force received a call from the (b)(6),(b)(7)(C)@MIT.EDU of Massachusetts Institute of Technology Police that an unauthorized computer had been found in a wire closet on MIT grounds and Network Traffic suggested that the computer was being used to download technical journals. The computer was found in a wire closet of in the basement of Building 16, the Dorrance Building (77 Massachusetts Avenue) which has MIT Biological Engineering Department (b)(6),(b)(7)(C)@mit.edu, and (b)(6),(b)(7)(C) Security Analyst for MIT stated that on 01/03/11 the library had notified him that someone was downloading large numbers of journals from the library without authorization. Large amounts of unauthorized downloading was first noticed by the library on 09/29/10 and on 11/23/10 there was another incident of excessive downloading. From 01/03/11 to 01/04/11, (b)(6), (b)(6), (b)(7) was able to trace the activity to a particular switch in the wire closet. When (b)(6),(b)(7)(C) (b)(6),(b)(7)@mit.edu) when to examine the wire closet he found the unauthorized computer connected to the switch. An external hard drive was connected to the netbook. The netbook was an Acer Aspire One with a serial number LUSAX0D001001100E1601. The netbook matches the description of an Acer netbook (b)(6),(b)(7)(C) reported as

stolen to MIT Police on 12/31/10. The netbook appeared to be using two IP address (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) which are IP address belonging to MIT. Use of NMap showed that the netbook had port 22 and 8092 open. Port 22 is the default port for SSH (Secure Shell network protocol) and port 8092 that is often associated with TCP (Transmission Control Protocol) traffic. Cambridge Police processed the scene for prints. Stickers on the outside of the netbook showed that it was originally loaded with Windows 7 starter edition but an examination of the screen indicated that the current operating system was Ubuntu, a type of Linux. The login screen showed a computer name of "ghost-laptop" with the user "Gene Host" logged in. The login screen had a password. All efforts to bypass the login screen were futile. (b)(6),(b)(7)(C) started a wireshark packet capture of traffic on the switch around 9AM on 01/04/11 and the packet capture is continuing. (b)(6),(b)(7)(C) provided SA (b)(6) with a copy of flow traffic on the network. The flow traffic is currently being uploaded to the CERT dropbox. MIT decided to leave the netbook running in place with the hopes of capturing more network traffic to show if a suspect was controlling the netbook through a SSH channel and if the network traffic can show where the suspect is controlling the netbook from. MIT placed a camera in the wire closet to observe if the suspect returns for the netbook. MIT also established an alarm to notify MIT if the netbook is removed from the network. The technical journals being downloaded have a monetary value. All MIT students have access to view the journals but are limited as to how much they can download and anyone outside of MIT including students after they graduate have to pay a substantial subscription to access the files. The price for downloading one file can vary from \$200.00 to \$3,000.00. Total value of the downloaded files could be in excess of \$50,000.00.

At 1526 on 01/04/11 this individual came back and appears to be replacing the external drive:

FYI

Unauthorized activity on Massachusetts Institute of Technology network

On 01/04/11 Detective (b)(6),(b)(7)(C) of the Cambridge Police Department and a member of the New England Electronic Crimes Task Force received a call from the (b)(6),(b)(7)(C) MIT.EDU of Massachusetts Institute of Technology Police that an unauthorized computer had been found in a wire closet on MIT grounds and Network Traffic suggested that the computer was being used to download technical journals. The computer was found in a wire closet of in the basement of Building 16, the Dorrance Building (77 Massachusetts Avenue) which has MIT Biological Engineering Department (b)(6),(b)(7)(C) @mit.edu, an (b)(6),(b)(7)(C) Security Analyst for MIT stated that on 01/03/11 the library had notified him that someone was downloading large numbers of journals from the library without authorization. Large amounts of unauthorized downloading was first noticed by the library on 09/29/10 and on 11/23/10 there was another incident of excessive downloading. From 01/03/11 to 01/04/11 (b)(6),(b)(7)(C) (b)(6),(b)(7)(C) was able to trace the activity to a particular switch in the wire closet. When (b)(6),(b)(7)(C) (b)(6),(b)(7)(C) @mit.edu when to examine the wire closet he found the unauthorized computer connected to the switch. An external hard drive was connected to the netbook. The netbook was an Acer Aspire One with a serial number LUSAX00001001100E1601. The netbook matches the description of an Acer netbook (b)(6),(b)(7)(C) reported as stolen to MIT Police on 12/31/10. The netbook appeared to be using two IP addresses (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) which are IP address belonging to MIT. Use of NMap showed that the netbook had port 22 and 8092 open. Port 22 is the default port for SSH (Secure Shell network protocol) and port 8092 that is often associated with TCP (Transmission Control Protocol) traffic. Cambridge Police processed the scene for prints. Stickers on the outside of the netbook showed that it was originally loaded with Windows 7 starter edition but an examination of the screen indicated that the current operating system was Ubuntu, a type of Linux. The login screen showed a computer name of "ghost-laptop" with the user "Gene Host" logged in. The login screen had a password. All efforts to bypass the login screen were futile. (b)(6),(b)(7)(C) started a Wireshark packet capture of traffic on the switch around 9AM on 01/04/11 and the packet capture is continuing. (b)(6),(b)(7)(C) provided SA (b)(6),(b)(7)(C) with a copy of flow traffic on the network. The flow traffic is currently being uploaded to the CERT dropbox. MIT decided to leave the netbook running in place with the hopes of capturing more network traffic to show if a suspect was controlling the netbook through a SSH channel and if the network traffic can show where the suspect is controlling the netbook from. MIT placed a camera in the wire closet

to observe if the suspect returns for the netbook. MIT also established an alarm to notify MIT if the netbook is removed from the network. The technical journals being downloaded have a monetary value. All MIT students have access to view the journals but are limited as to how much they can download and anyone outside of MIT including students after they graduate have to pay a substantial subscription to access the files. The price for downloading one file can vary from \$200.00 to \$3,000.00. Total value of the downloaded files could be in excess of \$50,000.00.

Subject: Re: another response - FW: Re linux box

Hey (b)(6), not that I know of (to execute a script off a stick); there does exist an autorun configuration utility in Ubuntu, but it's for media files so they'll automatically play (you can specify filetype and player), so not the same notion of autorun as Windows has. But yeah, there exists no way I know of to get a script to autorun off a USB stick upon hotplug.

I'm thinking two things to get a prompt on that machine currently:

- a) I'm currently fuzzing CherryPy for the heck of it -- there's no current vuln info on the app; that's a long shot at best..
- b) MITM the sshd (might be a winner, if he, or someone else connecting, doesn't spook about fingerprint mismatch) with an sshd that dumps passwords. Or, if last resort, take netbook offline temporarily, mount the disk and grab the host's keys, and set up MITM with those keys so they'll match...

Subject: Summary

Unauthorized activity on Massachusetts Institute of Technology network

On 01/04/11 Detective (b)(6),(b)(7)(C) of the Cambridge Police Department and a member of the New England Electronic Crimes Task Force received a call from the (b)(6),(b)(7)(C) (MIT.EDU) of Massachusetts Institute of Technology Police that an unauthorized computer had been found in a wire closet on MIT grounds and Network Traffic suggested that the computer was being used to download technical journals. The computer was found in a wire closet of in the basement of Building 16, the Dorrance Building (77 Massachusetts Avenue) which has MIT Biological Engineering Department (b)(6),(b)(7)(C) @mit.edu, an (b)(6),(b)(7)(C) Security Analyst for MIT stated that on 01/03/11 the library had notified him that someone was downloading large numbers of journals from the library without authorization. Large amounts of unauthorized downloading was first noticed by the library on 09/29/10 and on 11/23/10 there was another incident of excessive downloading. From 01/03/11 to 01/04/11 (b)(6),(b)(7)(C) was able to trace the activity to a particular switch in the wire closet. When (b)(6),(b)(7)(C) (b)(6),(b)(7)(C) @mit.edu) when to examine the wire closet he found the unauthorized computer connected to the switch. An external hard drive was connected to the netbook. The netbook was an Acer Aspire One with a serial number LUSAX0001001100E1601. The netbook matches the description of an Acer netbook (b)(6),(b)(7)(C) reported as stolen to MIT Police on 12/31/10. The netbook appeared to be using two IP addresses (b)(6),(b)(7)(C) and (b)(6),(b)(7)(C) which are IP address belonging to MIT. Use of NMap showed that the netbook had port 22 and 8092 open. Port 22 is the default port for SSH (Secure Shell network protocol) and port 8092 that is often associated with TCP (Transmission Control Protocol) traffic. Cambridge Police processed the scene for prints. Stickers on the outside of the netbook showed that it was originally loaded with Windows 7 starter edition but an examination of the screen indicated that the current operating system was Ubuntu, a type of Linux. The login screen showed a computer name of "ghost-laptop" with the user "Gene Host" logged in. The login screen had a password. All efforts to bypass the login screen were futile (b)(6),(b)(7)(C) started a wireshark packet capture of traffic on the switch around 9AM on 01/04/11 and the packet capture is continuing. (b)(6),(b)(7)(C) provided SA (b)(6),(b)(7)(C) with a copy of flow traffic on the network. The flow traffic is currently being uploaded to the CERT dropbox. MIT decided to leave the netbook running in place with the hopes of capturing more network traffic to show if a suspect was controlling the netbook through a SSH channel and if the network traffic can show where the suspect is controlling the netbook from. MIT placed a camera in the wire closet to observe if the suspect returns for the netbook. MIT also established an alarm to notify MIT if the netbook is removed from the network.

Hi (b)(6),(b)(7)(C)

Originally her name came across my desk from IRS, there is some financial activity that triggered us to look at her. The banking address had her out of a Cambridge address.

It has to do with her little side business.

(b)(6),(b)(7)(C)

Believe it or not she is making a few extra bucks. In my IRS Task Force capacity I am not sure if we'll take action since she is claiming her income but I still might refer the case out to Vice.

Life is stranger than fiction.

Thanks for the follow up information, have a good weekend.

Subject: Live Capture of Linux Box with out Admin Rights

I have an Acer Aspire that has some version Ubuntu loaded on it. It is physically patched into a switch at MIT and has been downloading technical journals from the Network. The laptop is on but the login screen has a password. Does anyone know a way to capture the RAM or live image with out logging in or a way to bypass the login password in Linux?

I can blast this out on the HTCC and CFID boards (with the victim name redacted) if you want. Would you like me to do that?
